

TRANSPORTATION DEFICIENCIES & NEEDS

This public workshop has been coordinated to initiate an operational improvements study that will look at ways to improve transportation and mobility along the US Route 340 corridor near Harpers Ferry, West Virginia, through Virginia and into Maryland at MD Route 67. This is a collaborative effort in which the state DOTs wish to improve transportation throughout this historically rich and environmentally important area. The Study is a result of a recommendation from the Hagerstown/Eastern Panhandle (HEP) Metropolitan Planning Organization's Long Range Transportation Plan, and will evaluate years 2012 and 2022 for operational improvements.
