

The Need for Innovative Delivery in Ohio

Gas tax is not enough

\$1.6B shortfall in shovel-ready projects

\$10B need in future project development

Preservation needs continue to grow while gas receipts decline

No money for new capacity

Building the Organization

- 2011 P3 legislation
- 2012 Division of Innovative Delivery

Its time to step on the GAS

Portsmouth Bypass, Design-Build-Finance-Operate-Maintain PSB-DBFOM

Project Location

- Rural community in Scioto County
- 90 miles south of Columbus, OH
- 45 miles northwest of Huntington, WV
- Last segment in Ohio Appalachian System
- Originally planned to be built in 3 phases as DBB

PSB-DBFOM: Project Scope

- Missing link in the ADHS connecting Ohio to North Carolina
- 16-mile, 4-lane, limited access highway in Scioto County
- Bypasses 26 miles of US 23 and US 52
- Interchanges at:
 - US52 & SR140
 - TR234 (Shumway Road)
 - CR28 (Lucasville-Minford Road)
 - US23

PSB-DBFOM: Project Scope

Key Characteristics of Reference Design

Significant earthwork:

- ~25M Cubic Yards of excavation, mainly rock
- ~20M Cubic Yards of embankment
- 21 bridges and 17 retaining walls
- Two horizontally curved bridges over US 23 (north end)
- Long bridge over Little Scioto River with 100' piers

High fill embankments (> 180') and deep culverts (> 170')

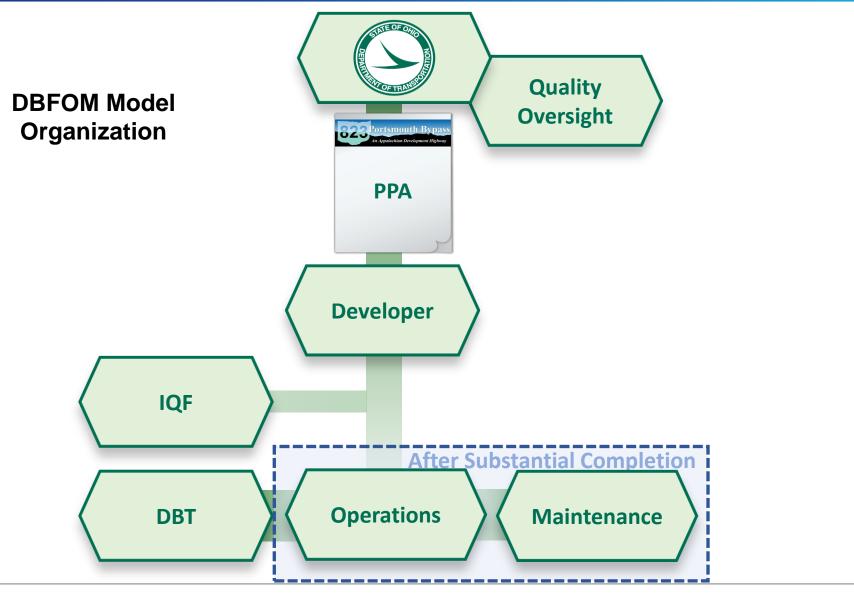

PSB-DBFOM: Why Do It?!

Delivery Options Analysis Findings

- Accelerates the project delivery by eight years
- Delivers the complete project rather than phases with limited utility
- Frees budgetary capacity in the short-term
- Provides similar or lower whole life cost to design-bid-build
- Allows ODOT to pay for the project over a longer period and with TIFIA rural rate included with cost savings
- Enables competitive, firm fixed-price with appropriate risk transfer and de facto long-term warranty of construction
- Generates economies of scale related to construction
- Creates jobs now when construction prices are low

PSB-DBFOM: Public Private Agreement

PSB-DBFOM: Technical approach

Design and Construction

Developer must construct Basic Configuration (specified # of lanes and interchanges) at a minimum

Performance based specifications

- Baseline applicable standards established
 - Not prescriptive when possible
- Reduced # of Alternative Technical Concepts due to available flexibility within scope
- Performance-based O&M Scope encourages efficient lifecycle decisions 35 years
- Failure to meet performance measures results in a Non-Compliance Event which impacts payment to the Developer

Handback

- Establishes requirements for condition of assets at the end of the 35 year Operating Period
- Supported by hand-back reserve, funded 24 months prior to the end of project term

PSB-DBFOM: Technical approach

Risk Allocation

Geotechnical Risk

- Full allocation to the Developer
- Significant geotechnical analysis previously completed by the Department provided as Reference Information (not contractual)
- Opportunity for investigations prior to proposal submittal

PSB-DBFOM: Technical approach – O&M

Developer Capital Maintenance Scope

- Pavement resurfacing and reconstruction
- Bridge maintenance and rehabilitation
- Retaining walls, slopes and drainage maintenance

Developer Routine Maintenance Scope

- General cleaning, mowing, minor repairs
- Maintenance of traffic

ODOT retained Routine Maintenance Scope

- Winter maintenance (snow and ice treatment)
- Incident response/ emergency management
- Roadway weather information sensors

PSB-DBFOM: Financial approach

Milestone Payments

- ADHS funds to be used \$44m
- 70%, 80% and Substantial Completion

Availability Payment structure

- In return for the opportunity to earn Availability Payments:
 - Developer will design, build, finance, operate and maintain facility for ~35 years following Substantial Completion
 - Equity investors and debt providers are at-risk if payments are not earned

PSB-DBFOM: Financial approach

Finance sources will ultimately be determined by the Proposer

Potential Finance Sources

- PABs
 - \$610M allocation
- TIFIA
 - 33% of Project Eligible Costs
 - Up to \$230M at TIFIA Rural Rate (~1.7%)
- Developer Equity
- Bank Financing

PSB-DBFOM: Financial approach

TIFIA

- Critical to obtaining value for money
- Authorization to use TIFIA rural rate provided significant savings
 - Status of TIFIA rural rate was unknown during Delivery Options Analysis
- Baseline TIFA Term Sheet
 - DOT coordination on behalf of the Proposers

PSB-DBFOM: Financial/Contractual Approach

Appropriations Risk

Ohio Constitutional Issues associated with unauthorized debt

- Obligations limited to two-year biennium
- If ODOT did not appropriate, sole remedy was to seek a termination payment
- Obligation to seek appropriation did not survive due to Ohio Constitution

PPA + Lease Approach

- To create a legally enforceable claim, ODOT will provide right of way by lease
- Legally accepted and can extend beyond biennium
- Creates long-term relationship between DOT and Developer
- Provides a legally valid method for paying a termination payment
- Provides Developer a constitutionally valid claim if the termination payment is not paid

PSB-DBFOM: Payment mechanism

Non-compliance Deductions

- Points based system covering compliance, reporting, notification requirements
- \$5,000 (indexed) per point
- Applicable to Construction and Operating Period
- Persistent Breach could lead to default
- Deductions assessed against
 Substantial Completion Milestone
 Payment and Availability Payments
- Self-reporting with ODOT oversight
 - Enforced by audit and noncompliance regime

Unavailability Deductions

- Monetary deductions from monthly payments for unavailability/closures of ramps, single and multiple lanes
- Values weighted based on time of day and weekend/weekday
- Indexed according to CPI
- Persistent Breach trigger can be reached through excessive unavailability
- Exemptions for Permitted Closures included

PSB-DBFOM: What's Trending

The Portsmouth Gateway Group (PGG) includes the following team members:

- ACS Infrastructure Development, Inc.
- Infrared Capital Partners Limited
- Star America Fund GP
- Dragados, USA, Inc.
- The Beaver Excavating Company
- John R. Jurgensen, Co., Inc.
- ms Consultants, Inc.

PSB-DBFOM: What's Trending

The Success of the PSB-DBFOM Procurement

- The contract documents provided a clear description of the requirements and expectations of the Project
- The project scope was based on a performance driven model that encouraged innovation in design, material selection, construction methods and life cycle considerations
- Savings:

Design and construction costs
