The guardrail transition is appropriate for connection to a vertical concrete shape and should not be connected directly to a concrete safety shape. Concrete safety shape bridge rails or barriers shall be transitioned to a vertical shape at a slope of 10:1 or flatter. W-beam as per Standard Detail Sheet GR1 to GR2. See sheet 2 of 2 for details not shown on this sheet. The two sections of 12'-6" thrie beam require additional holes in order to mount the beam to the post nearest to the concrete wall. This guardrail transition is appropriate for connection to a vertical concrete shape and should not be connected directly to a concrete safety shape. Concrete safety shape bridge rails or barriers shall be transitioned to a vertical shape at a slope of 10:1 or flatter. W-beam as per Standard Detail Sheet GR1 to GR2. See sheet 2 of 2 for details not shown on this sheet. The two sections of 12'-6" thrie beam require additional holes in order to mount the beam to the post nearest to the concrete wall. This guardrail transition is appropriate for connection to a vertical concrete shape and should not be connected directly to a concrete safety shape. Concrete safety shape bridge rails or barriers shall be transitioned to a vertical shape at a slope of 10:1 or flatter. W-beam as per Standard Detail Sheet GR1 to GR2. See sheet 2 of 2 for details not shown on this sheet. The two sections of 12'-6" thrie beam require additional holes in order to mount the beam to the post nearest to the concrete wall.
