		85th Percentile Speed		**39 MPH**			

(1) Typical vehicles inlcude motorcycles, passenger cars, and other two-axle, four-tire, single unit vehicles.
(2) Heavy vehicles includes buses and trucks.

Appendix D. Level of Service Definitions

Intersection Levels of Service (LOS) Definitions

Level of Service A – LOS A describes operations with a control delay of 10 s/veh or less and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to capacity ratio is low and either progression is exceptionally favorable or the cycle length is very short. If it is due to favorable progression, most vehicles arrive during the green indication and travel through the intersection without stopping.

Level of Service B – LOS B describes operations with control delay between 10 and 20 s/veh and a volume–to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is low and either progression is highly favorable or the cycle length is short. More vehicles stop than with LOS A.

Level of Service C – LOS C describes operations with control delay between 20 and 35 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when progression is favorable or the cycle length is moderate. Individual *cycle failures* (i.e., one or more queued vehicles are not able to depart as a result of insufficient capacity during the cycle) may begin to appear at this level. The number of vehicles stopping is significant, although many vehicles still pass through the intersection without stopping.

Level of Service D – LOS D describes operations with control delay between 35 and 55 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high and either progression is ineffective or the cycle length is long. Many vehicles stop and individual cycle failures are noticeable.

Level of Service E – LOS E describes operations with control delay between 55 and 80 s/veh and a volume-to-capacity ratio no greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is high, progression is unfavorable, and the cycle length is long. Individual cycle failures are frequent.

Level of Service F – LOS F describes operations with control delay exceeding 80s/veh when the volume-to-capacity ratio greater than 1.0. This level is typically assigned when the volume-to-capacity ratio is very high, progression is very poor, and the cycle length is long. Most cycles fail to clear the queue.

Level of Service Criteria

Level of Service	Signalized Intersections Control Delay (s./veh.)	Unignalized Intersections Control Delay (s./veh.)
A	0 - 10	0 - 10
B	> 10 - 20	> 10 - 15
C	> 20 - 35	> 15 - 25
D	> 35 - 55	> 25 - 35
E	> 55 - 80	> 35 - 50
F	> 80	> 50

(1) Due to the close proximity of the intersections on Greenbag Road, between Dorsey Avenue/Kingwood Pike and Richard Avenue, peak hour traffic volumes were balanced.
(2) 2048 Design Year Volumes were grown by applying a 1.16% per year, linear, growth rate, obtained from the MMMPO.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

ALL VEHICLES:			33.2	32.1	3319.1#	70.5#	1118.3	1118.3	34.8

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

SIDRA Standard Delay Model is used. Control Delay is the sum of Stop-line Delay and Geometric Delay.
dm: Minimum delay for gap acceptance cases
dSL: Stop-line delay (=d1+d2)
dn: Average stop-start delay for all vehicles queued and unqueued
dq: Queuing delay (the part of the stop-line delay that includes stopped delay and queue move-up delay)
dqm: Queue move-up delay
di: Stopped delay (stopped (idling) time at near-zero speed)
dig: Geometric delay
dic: Control delay

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

SIDRA Standard Delay Model is used. Control Delay is the sum of Stop-line Delay and Geometric Delay.
dm: Minimum delay for gap acceptance cases
dSL: Stop-line delay (=d1+d2)
dn: Average stop-start delay for all vehicles queued and unqueued
dq: Queuing delay (the part of the stop-line delay that includes stopped delay and queue move-up delay)
dqm: Queue move-up delay
di: Stopped delay (stopped (idling) time at near-zero speed)
dig: Geometric delay
dic: Control delay

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

  The capacity values of Continuous Lanes are obtained by adjusting the basic
  saturation flow for lane width, grade, movement class and turning vehicle effects.
  Saturation flow scale applies if specified.

1	0.416	NA	NA	0.1	0.2	0.0	0.2	1.1	0.0	0.0	0.0	4.8	5.0

SIDRA Standard Delay Model is used. Control Delay is the sum of Stop-line Delay and Geometric Delay.
dm: Minimum delay for gap acceptance cases
dSL: Stop-line delay (=d1+d2)
dn: Average stop-start delay for all vehicles queued and unqueued
dq: Queuing delay (the part of the stop-line delay that includes stopped delay and queue move-up delay)
dqm: Queue move-up delay
di: Stopped delay (stopped (idling) time at near-zero speed)
dig: Geometric delay
dic: Control delay

Flow rates shown above are Arrival Flow Rates (veh/h) based on the following input specifications:
Unit Time for Volumes =  60 minutes
Peak Flow Period =  15 minutes
Effects of Volume Factors (Peak Flow Factor, Flow Scale, Growth Rate) are included.
Arrival Flow Rates may be less than Demand Flow Rates if capacity constraint applies in
network analysis.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

E	T1	2	Dominant	2.00	0.173	Y	1.07	4.67	110.5	3.05
S	R2	2	Dominant	2.00	0.173	Y	1.15	5.02	118.7	3.28

Roundabout Capacity Model: SIDRA Standard
Priority sharing means Follow-up Headway plus Intra-bunch Headway
is larger than the Critical Gap.

Dist (Distance): Spacing, i.e. distance between the front ends of two
successive vehicles across all lanes in the circulating
or exiting stream

West: Greenbag Road			
1	0	0	0.0%
2	154	156	100.0%
Total	154	156	

The SIDRA Standard roundabout capacity model option is in use.
This model takes into account the total circulating flow as well as the effect

of flow distribution in circulating lanes on the entry capacity results.

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

  SIDRA Standard Delay Model is used.  Control Delay is the sum of Stop-line Delay
  and Geometric Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

Flow rates shown above are Arrival Flow Rates (veh/h) based on the following input specifications:
Unit Time for Volumes =  60 minutes
Peak Flow Period =  15 minutes
Effects of Volume Factors (Peak Flow Factor, Flow Scale, Growth Rate) are included.
Arrival Flow Rates may be less than Demand Flow Rates if capacity constraint applies in
network analysis.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Roundabout Capacity Model: SIDRA Standard
Priority sharing means Follow-up Headway plus Intra-bunch Headway
is larger than the Critical Gap.

Dist (Distance): Spacing, i.e. distance between the front ends of two
successive vehicles across all lanes in the circulating
or exiting stream

The capacity values of Continuous Lanes are obtained by adjusting the basic saturation flow for lane width, grade, movement class and turning vehicle effects. Saturation flow scale applies if specified.

  SIDRA Standard Delay Model is used.  Control Delay is the sum of Stop-line Delay
  and Geometric Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Roundabout Capacity Model: SIDRA Standard
Priority sharing means Follow-up Headway plus Intra-bunch Headway is larger than the Critical Gap.

Dist (Distance): Spacing, i.e. distance between the front ends of two successive vehicles across all lanes in the circulating or exiting stream

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

```
  SIDRA Standard Delay Model is used.  Control Delay is the sum of Stop-line Delay
  and Geometric Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay
```

Cycle Length: 90			
Actuated Cycle Length: 89.2			
Natural Cycle: 150			
Control Type: Actuated-Uncoordinated			
Maximum v/c Ratio: 1.35			
Intersection Signal Delay: 126.7		Intersection LOS: F	
Intersection Capacity Utilization 100.6%		ICU Level of Service G	
Analysis Period (min) 15			

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 2: Kingwood Pike (CR 81)/Dorsey Ave & Greenbag Rd (CR 857)

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
SIDRA Standard Delay Model is used. Control Delay includes Geometric Delay.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Roundabout Capacity Model: SIDRA Standard
Priority sharing means Follow-up Headway plus Intra-bunch Headway
is larger than the Critical Gap.

Dist (Distance): Spacing, i.e. distance between the front ends of two
successive vehicles across all lanes in the circulating
or exiting stream

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

  SIDRA Standard Delay Model is used.  Control Delay is the sum of Stop-line Delay
  and Geometric Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

Roundabout Capacity Model: SIDRA Standard
Priority sharing means Follow-up Headway plus Intra-bunch Headway
is larger than the Critical Gap.

Dist (Distance): Spacing, i.e. distance between the front ends of two
successive vehicles across all lanes in the circulating
or exiting stream

The SIDRA Standard roundabout capacity model option is in use.
This model takes into account the total circulating flow as well as the effect

of flow distribution in circulating lanes on the entry capacity results.

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

  SIDRA Standard Delay Model is used.  Control Delay is the sum of Stop-line Delay
  and Geometric Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: SIDRA Standard.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: SIDRA Standard (Akçelik M3D).
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

The SIDRA Standard roundabout capacity model option is in use.

This model takes into account the total circulating flow as well as the effect of flow distribution in circulating lanes on the entry capacity results.

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

  HCM Delay Formula option used (Exclude Geometric Delay option applies). Control
  Delay does not include Geometric Delay, and Stop-line Delay is treated as being
  same as Control Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

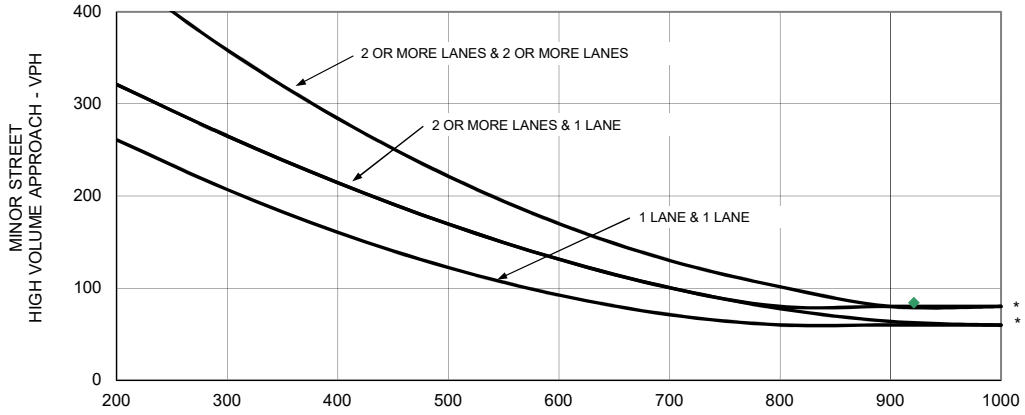
Signal warrant satisfied?				**YES**



Signal warrant satisfied if hourly threshold satisfied for each of any 4 hours of an average day.

First, determine which lane configuration represents the leg that is being studied. Then, based on the movements for each hour, find the percent reduction for each hour with the Pagones Theorem*.

Situation	Approach Configuration	Pagones Theorem Condition	Reduction of right turns
1	Shared left/through right	R > 0.7A	Reduce R by 60 percent
		0.7A≥ R > 0.35A	Reduce R by 30 percent
		R ≤ 0.35A	Reduce R by 20 percent
2	Exclusive left, shared through/right	R >3T	Reduce R by 60 percent
		3T ≥ R ≥ T/3	Reduce R by 30 percent
		R ≤ T/3	Reduce R by 20 percent
3	Any configuration with an exclusive right turn lane (usually ≥ 600 feet long)		Reduce R by 75 percent in all cases
4	Shared left/through and shared through/right	R > (T+L)	Reduce R by 65 percent
		L > (T+R)	Use Situation 2
		L = T = R (± 10 vehicles)	Reduce R by 40 percent
		L = T > 3R	Reduce R by 20 percent
		R = T >3L	Reduce R by 50 percent
		All other cases	Reduce R by 30 percent
5	Exclusive left, exclusive through and shared through/right	R > T	Reduce R by 75 percent
		T ≥ R ≥ T/2	Reduce R by 50 percent
		T/2 ≥ R > T/4	Reduce R by 30 percent
		R ≤ T/4	Reduce R by 15 percent

Where:

L = number of left turning vehicles in approach

(1) Percent right turn volume of the side street approach calculated to determine the reduction of right turns per Pagones Theorem.

Pagones Theorem for a single-lane shared left (L)/through (T)/right(R) approach (A):

if	Condition	Right Turn Reduction
	R > 0.7A	Reduce R by 60%
	0.7A >= R > 0.35A	Reduce R by 30%
	R <0.35A	Reduce R by 20%

RE: Traffic Analysis Supplement
Greenbag Road PIE Traffic Study
City of Morgantown, Monongalia County, WV

Dear Mr. Meadows:

Stahl Sheaffer Engineering, LLC (Stahl Sheaffer) has prepared this traffic analysis supplement to the *Greenbag Road Preliminary Investigation and Engineering (PIE) Traffic Study*, dated Revised February 2019 (February 2019 Study), to provide updated traffic analyses for the intersections of Greenbag Road (CR 857) at Mississippi Avenue and Greenbag Road (CR 857) at Dorsey Avenue/Kingwood Pike (CR 81). Since submission of the February 2019 Study, the roundabout design at the two (2) proposed locations have been modified to incorporate feedback and direction from representatives at the West Virginia Department of Highways (WVDOH).

The traffic analysis included in this supplement summarizes the results of the capacity and queue analyses completed for the following forecasted conditions and improvement option(s) during both the weekday AM and weekday PM peak hours:

- Greenbag Road (CR 857) and Mississippi Avenue
  - 2048 Design Year Condition Without Improvements
  - 2048 Design Year Condition With Proposed Traffic Signal Improvement
  - 2048 Design Year Condition With Proposed Roundabout Improvement - with Eastbound Left Turn Lane
  - 2048 Design Year Condition With Proposed Roundabout Improvement - with Eastbound Left Turn Lane and Westbound Right Turn Lane
- Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81)
  - 2048 Design Year Condition Without Improvements
  - 2048 Design Year Condition With Proposed Traffic Signal Improvement - with Left Turn Lanes on All Approaches
  - 2048 Design Year Condition With Proposed Traffic Signal Improvement – with Left Turn and Right Turn Lanes on All Approaches
  - 2048 Design Year Condition with Proposed Roundabout Improvement – with Eastbound Left Turn Lane

The capacity analyses were performed utilizing *Synchro* software, for unsignalized and signalized intersections, and *SIDRA INTERSECTION 8.0* software, for roundabouts, both based on the methodologies published in the *Highway Capacity Manual 6th Edition*, by the Transportation Research Board (HCM 6th Edition). The capacity analysis methodologies determine how well an intersection, approach to an intersection, or movement at an intersection operates, and assigns to it a level of service (LOS) A through F, with LOS A representing the best operating conditions and LOS F, the worst.

Level of service criteria for unsignalized and signalized (roundabout) intersections is summarized below:

HCM 6th Edition Level of Service Criteria		
Level of Service	**Average Control Delay (Seconds/Vehicle)**	
	Unsignalized Intersections	**Signalized (Roundabout) Intersections**
A	0 – 10	≤10
B	>10 – 15	>10 – 20
C	>15 – 25	> 20 – 35
D	>25 – 35	> 35 – 55
E	>35 – 50	>55 – 80
F	>50	>80

The queue analyses were performed using *Synchro* software, for unsignalized and signalized intersections, and *SIDRA INTERSECTION 8.0* software, for roundabouts, both reporting the 95th percentile queue length per movement, in feet.

Results of the capacity analysis and queue analysis conducted for the conditions and peak hours listed above are summarized on Table 1 and Table 2, respectively, and are included with this correspondence.

The following sections of this correspondence details the traffic analyses completed for each intersection, condition, and peak hour.

Greenbag Road (CR 857) and Mississippi Avenue

2048 Design Year Without Improvements: The intersection of Greenbag Road (CR 857) and Mississippi Avenue is a T-intersection that currently operates as two-way stop controlled (TWSC), with a stop sign on the southbound Mississippi Avenue approach and free-flowing on Greenbag Road. All approaches to this intersection currently provide a single lane to accommodate all applicable movements. An aerial image of the existing intersection conditions is presented in Exhibit 1.

Exhibit 1: Existing Conditions

Traffic analyses, which includes capacity analysis and queue analysis, were completed at this intersection for 2048 design year conditions without improvements during the weekday AM and weekday PM peak hours. The analysis of 2048 design year without development conditions provides a baseline intersection operation to compare to the potential improvement options operation.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Mississippi Avenue, without improvements, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	A	A
Westbound Greenbag Road	A	A
Southbound Mississippi Avenue	F	F
Overall Intersection	**F**	**D**

The results of the queue analyses indicate that the intersection of Greenbag Road (CR 857) Mississippi Avenue, without improvements, is anticipated to queue as follows:

Approach	Queue Length (Feet)	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	23’	23’
Westbound Greenbag Road	0’	0’
Southbound Dorsey Avenue	#748’	#288’

Note: # Denotes the movement volume-to-capacity ratio is greater than 1.00, and queues may extend longer than the reported length.

A summary of the capacity analysis and queue analysis results for the 2048 design year condition without improvements for the weekday AM and weekday PM peak hours at the intersection of Greenbag Road (CR 857) and Mississippi Avenue are presented on Table 1, provided with this correspondence.

Printouts of the Synchro analyses are included with this correspondence.

Greenbag Road (CR 857) and Mississippi Avenue

2048 Design Year With Traffic Signal Improvement: The proposed traffic signal improvement option at the intersection Greenbag Road (CR 857) and Mississippi Avenue includes the following improvements, as presented the *Synchro* software concept layout in Exhibit 2:

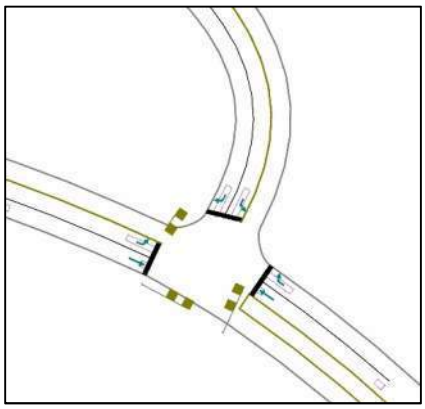

Exhibit 2: Traffic Signal

- Widen the eastbound Greenbag Road approach to provide an exclusive left turn lane and an exclusive through lane.
- Widen the westbound Greenbag Road approach to provide an exclusive through lane and an exclusive right turn lane.
- Widen the southbound Mississippi Avenue approach to provide an exclusive left turn lane and an exclusive right turn lane.
- Install traffic signal control, to provide three (3) phases:
  - A protected eastbound advance phase with a southbound right turn overlap.
  - A permissive eastbound/westbound phase.
  - A protected southbound left turn phase with a westbound right turn overlap.
- Traffic signal control to operate as fully actuated, uncoordinated.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Mississippi Avenue, with installation of a traffic signal and roadway improvements as detailed above, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	A	A
Westbound Greenbag Road	B	B
Southbound Mississippi Avenue	C	B
Overall Intersection	**B**	**A**

The results of the queue analyses indicate that proposed turn lanes would need to provide the following vehicular storage capacity to accommodate the forecasted queue lengths:

Turn Lane	Required Turn Lane Storage (Feet)		
	Vehicular Storage Length	Taper Length	Total Length
Eastbound Left Turn Lane Greenbag Road	225’	375’	600’
Westbound Right Turn Lane Greenbag Road	325’	320’	645’
Southbound Left/Right Turn Lane Mississippi Avenue	200’	245’	445’

The turn lane storage lengths listed above are required to accommodate the back of queue from the through movements along Greenbag Road and Mississippi Avenue.

A summary of the capacity analysis and queue analysis for the 2048 design year condition with the proposed traffic signal improvements, as detailed above, for the intersection of Greenbag Road (CR 857) and Mississippi Avenue are presented on Table 1, provided with this correspondence.

Printouts of the Synchro analyses are included with this correspondence.

Greenbag Road (CR 857) and Mississippi Avenue

2048 Design Year With Roundabout Improvement - With Eastbound Left Turn Lane: The proposed roundabout improvement option at the intersection Greenbag Road (CR 857) and Mississippi Avenue includes the following design elements, as presented in the *SIDRA INTERSECTION 8.0* concept layout in Exhibit 3:

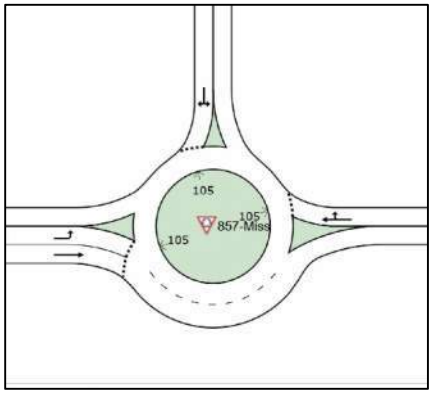

Exhibit 3: Roundabout

- The Greenbag Road/Mississippi Avenue roundabout provides one (1) circulating lane on the northern hemisphere and two (2) circulating lanes on the southern hemisphere, with an island diameter of approximately 105 feet.
- Eastbound Greenbag Road approach provides two (2) lanes, an exclusive left turn lane and an exclusive through lane.
- Westbound Greenbag Road approach provides one (1) lane for the shared through/right turn movement.
- Southbound Mississippi Avenue approach provides one (1) lane for the shared left turn/right turn movements.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Mississippi Avenue, with installation of the proposed roundabout and roadway improvement as detailed above, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	A	A
Westbound Greenbag Road	C	B
Southbound Mississippi Avenue	B	A
Overall Intersection	**B**	**A**

The results of the queue analyses indicate that proposed eastbound left turn lane would need to provide the following vehicular storage capacity to accommodate the forecasted queue lengths:

Turn Lane	Required Turn Lane Storage (Feet)		
	Vehicular Storage Length	Taper Length	Total Length
Eastbound Left Turn Lane Greenbag Road	125’	375’	500’

The eastbound left turn lane storage length listed above will accommodate the back of queue from the eastbound through movement on Greenbag Road.

It should be noted that the westbound shared through/right turn movement on Greenbag Road is forecasted to queue approximately 618 feet during the weekday AM peak hour and 208 feet during the weekday PM peak hour. This queue is not forecasted to extend beyond any adjacent driveways or intersections.

A summary of the capacity analysis and queue analysis for the 2048 design year condition with proposed roundabout and roadway improvements, as detailed above, for the intersection of Greenbag Road (CR 857) and Mississippi Avenue are presented on Table 1, provided with this correspondence.

Printouts of the SIDRA INTERSECTION 8.0 analyses are included with this correspondence.

Greenbag Road (CR 857) and Mississippi Avenue

2048 Design Year With Roundabout Improvement - With Eastbound Left Turn Lane and Westbound Right Turn Lane: The proposed roundabout improvement option at the intersection Greenbag Road (CR 857) and Mississippi Avenue includes the following design elements, as presented in the *SIDRA INTERSECTION 8.0* concept layout in Exhibit 4:

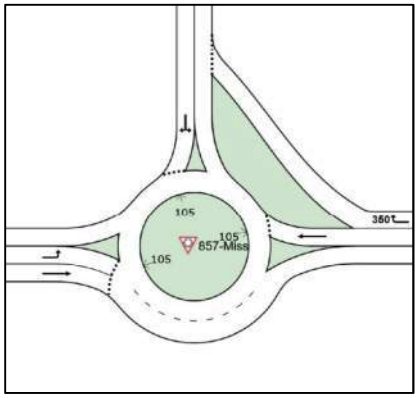

Exhibit 4: Roundabout

- The Greenbag Road/Mississippi Avenue roundabout provides one (1) circulating lane on the northern hemisphere and two (2) circulating lanes on the southern hemisphere, with an island diameter of approximately 105 feet.
- Eastbound Greenbag Road approach provides two (2) lanes, an exclusive left turn lane and an exclusive through lane.
- Westbound Greenbag Road approach provides two (2) lanes, an exclusive through lane and an exclusive by-pass right turn lane.
- Southbound Mississippi Avenue approach provides one (1) lane for the shared left turn/right turn movements.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Mississippi Avenue, with installation of the proposed roundabout and roadway improvements, as detailed above, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	A	A
Westbound Greenbag Road	A	A
Southbound Mississippi Avenue	B	A
Overall Intersection	**A**	**A**

The results of the queue analyses indicate that proposed turn lanes would need to provide the following vehicular storage capacity to accommodate the forecasted queue lengths:

Turn Lane	Required Turn Lane Storage (Feet)		
	Vehicular Storage Length	Taper Length	Total Length
Eastbound Left Turn Lane Greenbag Road	125’	375’	500’
Westbound Right Turn Lane Greenbag Road	100’	320’	420’

The turn lane storage lengths listed above will accommodate the back of queue from the through movements on Greenbag Road.

A summary of the capacity analysis and queue analysis for the 2048 design year condition with proposed roundabout and roadway improvements, as detailed above, for the intersection of Greenbag Road (CR 857) and Mississippi Avenue are presented on Table 1, provided with this correspondence.

Printouts of the SIDRA INTERSECTION 8.0 analyses are included with this correspondence.

Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81)

Exhibit 5: Existing Conditions

2048 Design Year Without Improvements: The intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) is a four (4) leg intersection, currently controlled by a two-phase, fully actuated, traffic signal. All approaches to this intersection currently provide a single lane to accommodate all movements. An aerial image of the existing intersection conditions is presented in Exhibit 5.

Traffic analyses, which includes capacity analysis and queue analysis, were completed at this intersection for 2048 design year conditions without improvements during the weekday AM and weekday PM peak hours. The analysis of 2048 design year without development conditions provides a baseline intersection operation to compare to the potential improvement options operation.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81), without improvements, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	C	F
Westbound Greenbag Road	C	E
Northbound Kingwood Pike	E	C
Southbound Dorsey Avenue	C	E
Overall Intersection	**C**	**F**

The results of the queue analyses indicate that the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81), is anticipated to queue as follows:

Approach	Queue Length (Feet)	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	370’	#954’
Westbound Greenbag Road	378’	#634’
Northbound Kingwood Pike	#643’	168’
Southbound Dorsey Avenue	196’	#535’

Note: # Denotes the movement volume-to-capacity ratio is greater than 1.00, and queues may extend longer than the reported length.

A detailed summary of the capacity analysis and queue analysis results for the 2048 design year condition without improvements for the weekday AM and weekday PM peak hours at the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) are presented on Table 2, provided with this correspondence.

Printouts of the Synchro analyses are included with this correspondence.

Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81)

2048 Design Year Traffic Signal Improvement - with Left Turn Lanes on All Improvements: The proposed traffic signal improvement option at the intersection Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) includes the following improvements, as presented the *Synchro* software concept layout in Exhibit 6:

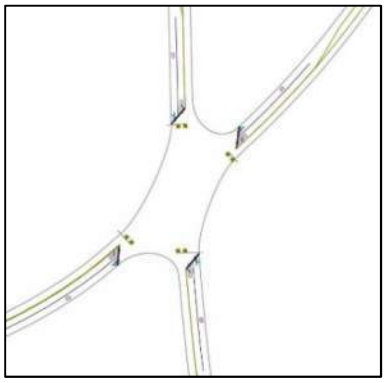

Exhibit 6: Traffic Signal

- Widen all approaches to provide an exclusive left turn lane and a shared through/right turn lane.
- Modify traffic signal control, to provide four (4) phases:
  - A protected eastbound/westbound left turn phase.
  - A permissive eastbound/westbound phase.
  - A protected northbound/southbound left turn phase.
  - A permissive northbound/southbound phase.
- Traffic signal control to operate as fully actuated, uncoordinated.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81), with proposed traffic signal and roadway improvements as detailed above, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	C	E
Westbound Greenbag Road	D	C
Northbound Kingwood Pike	D	D
Southbound Dorsey Avenue	C	F
Overall Intersection	**C**	**E**

The results of the queue analyses indicate that proposed turn lanes would need to provide the following vehicular storage capacity to accommodate the forecasted queue lengths:

Turn Lane	Required Turn Lane Storage (Feet)		
	Vehicular Storage Length	Taper Length	Total Length
Eastbound Left Turn Lane Greenbag Road	825’	375’	1,200’
Westbound Left Turn Lane Greenbag Road	550’	375’	925’
Northbound Left Turn Lane Kingwood Pike	425’	540’	965’
Southbound Left Turn Lane Dorsey Avenue	500’	245’	745’

The turn lane storage lengths listed above will accommodate the back of queue from the through movements along Greenbag Road, Dorsey Avenue, and Kingwood Pike.

A summary of the capacity analysis and queue analysis for the 2048 design year condition with traffic signal and roadway improvements, as detailed above, for the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) are presented on Table 2, provided with this correspondence.

Printouts of the Synchro analyses are included with this correspondence.

Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81)

2048 Design Year Traffic Signal Improvement - with Left Turn and Right Turn Lanes on All Approaches: The proposed traffic signal improvement option at the intersection Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) includes the following improvements, as presented the *Synchro* software concept layout in Exhibit 7.

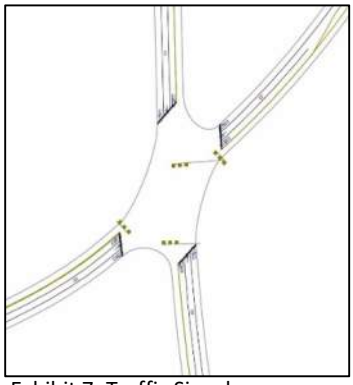

Exhibit 7: Traffic Signal

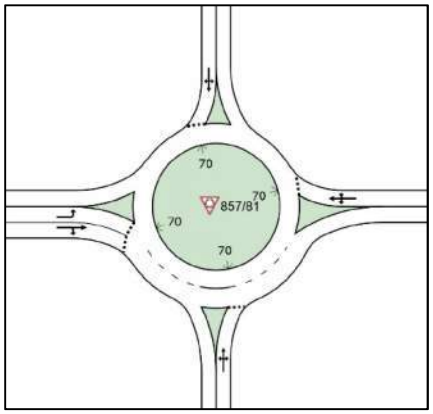
- Widen all approaches to provide an exclusive left turn lane, exclusive through lane, and an exclusive right turn lane.
- Modify traffic signal control, to provide four (4) phases:
  - A protected eastbound/westbound left turn phase with a northbound/southbound right turn overlap.
  - A permissive eastbound/westbound phase.
  - A protected northbound/southbound left turn phase with an eastbound/westbound right turn overlap.
  - A permissive northbound/southbound phase.
- Traffic signal control to operate as fully actuated, uncoordinated.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81), with proposed traffic signal and roadway improvements as detailed above, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	C	C
Westbound Greenbag Road	C	B
Northbound Kingwood Pike	C	C
Southbound Dorsey Avenue	C	C
Overall Intersection	**C**	**C**

The results of the queue analyses indicate that proposed turn lanes would need to provide the following vehicular storage capacity to accommodate the forecasted queue lengths:



Turn Lane	Required Turn Lane Storage (Feet)		
	Vehicular Storage Length	Taper Length	Total Length
Eastbound Left Turn Lane Greenbag Road	475’	375’	850’
Eastbound Right Turn Lane Greenbag Road	475’	375’	850’
Westbound Left Turn Lane Greenbag Road	450’	375’	825’
Westbound Right Turn Lane Greenbag Road	450’	375’	825’
Northbound Left Turn Lane Kingwood Pike	225’	540’	765’
Northbound Right Turn Lane Greenbag Road	225’	540’	765’
Southbound Left Turn Lane Dorsey Avenue	250’	245’	495’
Southbound Right Turn Lane Greenbag Road	250’	245’	495’

The turn lane storage lengths listed above will accommodate the back of queue from the through movements along Greenbag Road, Dorsey Avenue, and Kingwood Pike.

A summary of the capacity analysis and queue analysis for the 2048 design year condition with traffic signal and roadway improvements, as detailed above, at the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) are presented on Table 2, provided with this correspondence. Printouts of the Synchro analyses are included with this correspondence.

Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81)

2048 Design Year With Roundabout Improvement – with Eastbound Left Turn Lane: The proposed roundabout improvement option at the intersection Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) includes the following design elements, as presented in the *SIDRA INTERSECTION 8.0* concept layout in Exhibit 8:

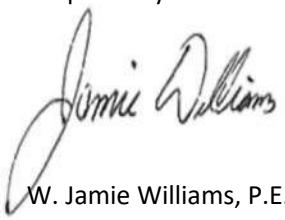
- The Greenbag Road/Dorsey Avenue/Kingwood Pike roundabout provides one (1) circulating lane on the northern hemisphere and two (2) circulating lanes on the southern, with an island diameter of approximately 70 feet.
- Eastbound Greenbag Road approach provides two (2) lanes, an exclusive left turn lane and a shared through/right turn lane.
- Westbound Greenbag Road approach provides one (1) lane for the shared left turn/through/right turn movement.
- Northbound Kingwood Pike approach provides one (1) lane for the shared left turn/through/right turn movement.
- Southbound Dorsey Avenue approach provides one (1) lane for the shared left turn/through/right turn movement.

The results of the capacity analyses indicate that the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81), with proposed roundabout improvement as detailed above, is forecasted to operate as follows:

Approach	Level of Service	
	AM Peak Hour	PM Peak Hour
Eastbound Greenbag Road	A	C
Westbound Greenbag Road	C	B
Northbound Kingwood Pike	B	B
Southbound Dorsey Avenue	B	C
Overall Intersection	**B**	**C**

The results of the queue analyses indicate that proposed eastbound left turn lane would need to provide the following vehicular storage capacity to accommodate the forecasted queue lengths:

Turn Lane	Required Turn Lane Storage (Feet)		
	Vehicular Storage Length	Taper Length	Total Length
Eastbound Left Turn Lane Greenbag Road	450’	375’	825’



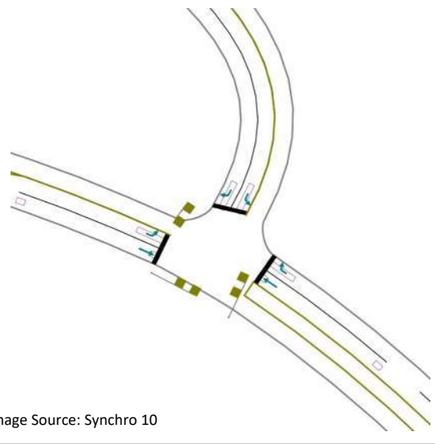
The turn lane storage length listed above will accommodate the back of queue from the eastbound through movement on Greenbag Road.

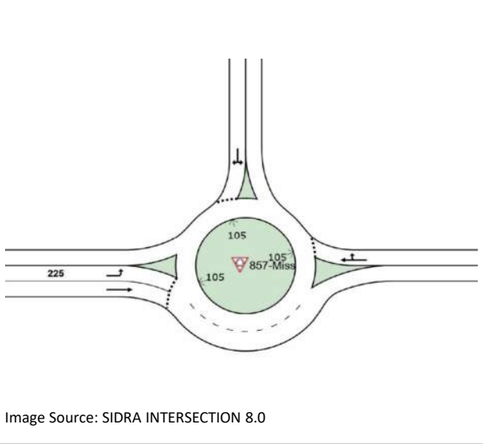
A summary of the capacity analysis and queue analysis for the 2048 design year condition with roundabout improvement, as detailed above, for the intersection of Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) are presented on Table 2, provided with this correspondence.

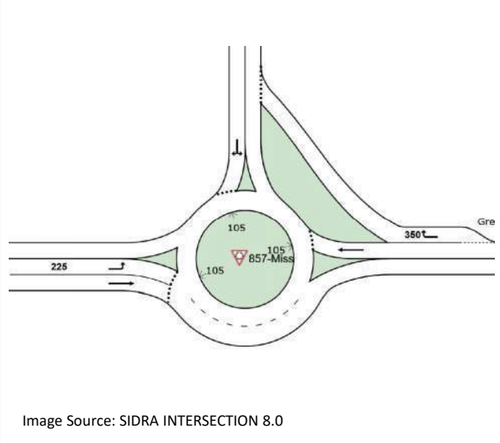
Printouts of the SIDRA INTERSECTION 8.0 analyses are included with this correspondence.

This concludes Stahl Sheaffer's traffic analysis supplement for the intersections of Greenbag Road (CR 857) with Mississippi Avenue and Greenbag Road (CR 857) with Dorsey Avenue/Kingwood Pike (CR 81). If you have any questions, feel free to call or e-mail jwilliams@sse-llc.com.

Respectfully Submitted,







W. Jamie Williams, P.E.

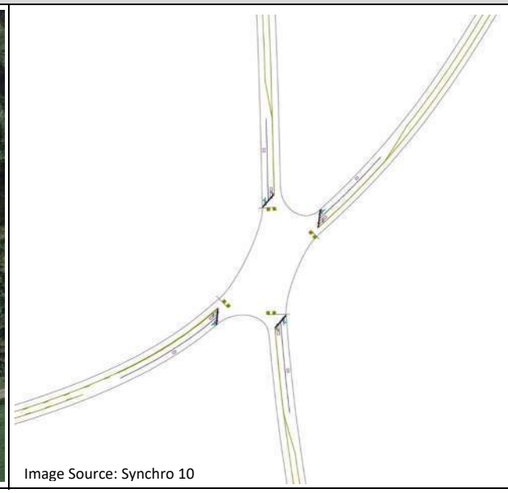
Intersection Schematic		 Image Source: Google Earth		 Image Source: Synchro 10		 Image Source: SIDRA INTERSECTION 8.0		 Image Source: SIDRA INTERSECTION 8.0					

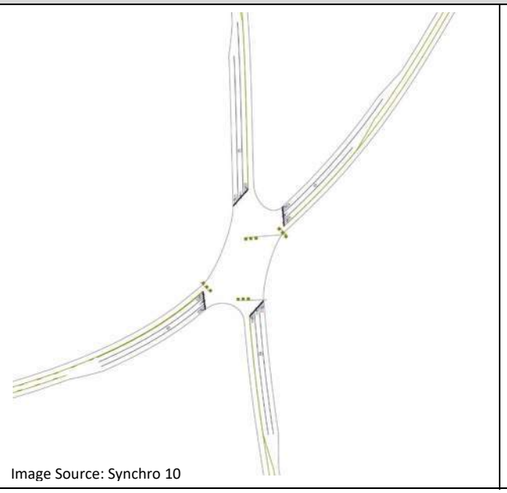
(1) Capacity calculations performed utilizing methodologies published in the *Highway Capacity Manual 6th Edition* , by the Transportation Research Board, utilizing Synchro 10 for the existing and proposed signalized intersection operation and SIDRA INTERSECTION 8.0 for the proposed roundabout option. SIDRA intersection reports delay in seconds, based on the level of service scale for signalized intersections.

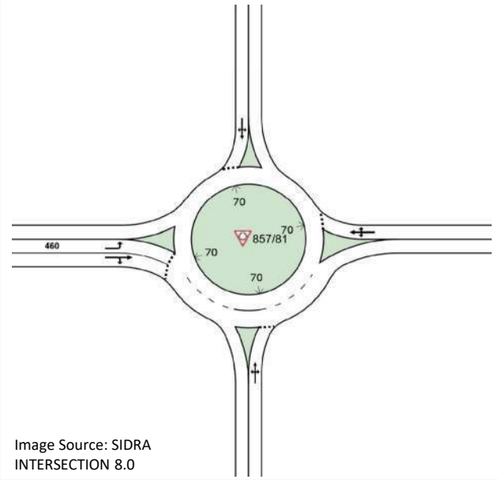
(2) For the existing and proposed traffic signal, Synchro 95th percentile queue length is reported, in feet. For the proposed roundabout, queue length analysis utilized SIDRA INTERSECTION 8.0, reporting the 95th percentile queue length, in feet.

(3) The existing lane configuration includes a single lane approach on all approaches accommodating all movements. The intersection currently operates as a two-way stop controlled intersection, with a stop sign on the southbound Mississippi Avenue approach and Greenbag Road is free-flowing.

(4) Traffic Signal. The proposed roadway configuration includes an exclusive left turn lane and an exclusive through lane on the eastbound Greenbag Road approach, an exclusive through lane and an exclusive right turn lane on the westbound Greenbag Road approach, and an exclusive left turn lane and an exclusive right turn lane on the southbound Mississippi Avenue approach. The proposed signal is anticipated to operate as 3-phases, which includes an advance eastbound phase with a southbound right turn overlap, a permissive eastbound/westbound phase, and a southbound protected phase.







(5) Roundabout. Includes a roundabout that provides one (1) circulating lane on the northern portion and two (2) lane circulating lanes on the southern portion. The eastbound Greenbag Road approach provides an exclusive left turn lane and an exclusive through lane. The westbound Greenbag Road approach and southbound Mississippi Avenue approach both provide a single lane for all movements.

(6) Roundabout. Includes a roundabout that provides one (1) circulating lane on the northern portion and two (2) lane circulating lanes on the southern portion. The eastbound Greenbag Road approach provides an exclusive left turn lane and an exclusive through lane. The westbound Greenbag Road approach provides an exclusive through lane and an exclusive by-pass right turn lane. The southbound Mississippi Avenue approach provides a single lane for all movements.

Note: # denotes that the v/c ratio for the reported movement is greater than 1.00.

Intersection Schematic		 Image Source: Google Earth		 Image Source: Synchro 10		 Image Source: Synchro 10		 Image Source: SIDRA INTERSECTION 8.0									

(1) Capacity calculations performed utilizing methodologies published in the *Highway Capacity Manual 6th Edition* , by the Transportation Research Board, utilizing Synchro 10 for the existing and proposed signalized intersection operation and SIDRA INTERSECTION 8.0 for the proposed roundabout option. SIDRA intersection reports delay in seconds, based on the level of service scale for signalized intersections.

(2) For the existing and proposed traffic signal, Synchro 95th percentile queue length is reported, in feet. For the proposed roundabout, queue length analysis utilized SIDRA INTERSECTION 8.0. The 95th percentile queue length is reported, in feet.

(3) Traffic Signal. Includes an exclusive left turn lane and a shared through/right turn lane on all approaches. Proposed signal is to operate as 4-phases, which includes an eastbound/westbound left turn phase, an eastbound/westbound permissive phase, a northbound/southbound left turn phase, and a northbound/southbound permissive phase.

(4) Traffic Signal. Includes an exclusive left turn lane, an exclusive through lane, and an exclusive right turn lane on all approaches. Proposed signal is to operate as 4-phases, which includes an eastbound/westbound left turn phase, an eastbound/westbound permissive phase, a northbound/southbound left turn phase, and a northbound/southbound permissive phase, as well as right turn overlaps for all right turn movements.

(5) Roundabout. Includes a roundabout that provides one (1) circulating lane on the northern portion and two (2) lane circulating lanes on the southern portion. The northbound Kingwood Pike, southbound Dorsey Avenue, and westbound Greenbag Road all provide a single lane approach for all movements. The eastbound Greenbag Road approach provides two (2) lanes, an exclusive left turn lane and a shared through/right turn lane.

Note: # denotes that the v/c ratio for the reported movement is greater than 1.00.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

----------------------------------------
  The US HCM 6 roundabout capacity model option is in use.
  This model considers only the total circulating flow and not the flow rates
  in individual circulating lanes.  To model the effects of flow distribution
  in circulating lanes on the entry capacity results, you should use the
  SIDRA Standard roundabout capacity model.

ALL VEHICLES:			31.8	28.1	3358.0#	81.4#	1131.5	1131.5	40.2

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

2	0.324	NA	NA	0.0	0.6	1.2

HCM Delay Formula option used:
Cycle-Average Queue is calculated using average delay from the HCM equation.
(i.e. HCM delays are treated as stop-line delays for this purpose).

OTHER QUEUE RESULTS (DISTANCE)

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

  The US HCM 6 roundabout capacity model option is in use.
  This model considers only the total circulating flow and not the flow rates
  in individual circulating lanes.  To model the effects of flow distribution
  in circulating lanes on the entry capacity results, you should use the
  SIDRA Standard roundabout capacity model.

APPROACH LANE FLOW RATES

ALL VEHICLES:			34.8	31.5	3362.3#	72.7#	1153.8	1153.8	36.6

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

INTERSECTION NEGOTIATION DATA

From Approach	To Exit	Turn	Negn Radius ft	Negn Speed mph	Negn Dist ft	App Dist ft	Exit Dist ft	Downstr Dist ft

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

Roundabout Flow Rates
Site: Greenbag & Mississippi - AM Peak - Modified 2

Site ID: 857-Miss
Roundabout

CIRCULATING LANE FLOW RATES

Lane No.	Circulating Flow Rate veh/h	pcu/h	Percent
East: Greenbag Road (CR 857)			
1	171	179	100.0%
Total	171	179	
North: Mississippi Avenue			
1	645	671	100.0%
Total	645	671	
West: Greenbag Road (CR 857)			
1	167	198	100.0%
Total	167	198	

The US HCM 6 roundabout capacity model option is in use.
This model considers only the total circulating flow and not the flow rates in individual circulating lanes. To model the effects of flow distribution in circulating lanes on the entry capacity results, you should use the SIDRA Standard roundabout capacity model.

EXITING LANE FLOW RATES

Lane No.	Exiting Flow Rate veh/h	pcu/h	Percent

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

-------------------------------------------------------------------------------------------------
  HCM Delay Formula option used (Exclude Geometric Delay option applies). Control
  Delay does not include Geometric Delay, and Stop-line Delay is treated as being
  same as Control Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

West: Greenbag Road (CR 857)			
1	59	59	100.0%
Total	59	59	

The US HCM 6 roundabout capacity model option is in use.
This model considers only the total circulating flow and not the flow rates in individual circulating lanes. To model the effects of flow distribution in circulating lanes on the entry capacity results, you should use the SIDRA Standard roundabout capacity model.

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

----------------------------------------

  The capacity values of Continuous Lanes are obtained by adjusting the basic
  saturation flow for lane width, grade, movement class and turning vehicle effects.
  Saturation flow scale applies if specified.

Flow rates shown above are Arrival Flow Rates (veh/h) based on the following input specifications:
Unit Time for Volumes =  60 minutes
Peak Flow Period =  15 minutes
Effects of Volume Factors (Peak Flow Factor, Flow Scale, Growth Rate) are included.
Arrival Flow Rates may be less than Demand Flow Rates if capacity constraint applies in
network analysis.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

  The US HCM 6 roundabout capacity model option is in use.
  This model considers only the total circulating flow and not the flow rates
  in individual circulating lanes.  To model the effects of flow distribution
  in circulating lanes on the entry capacity results, you should use the
```

```
  SIDRA Standard roundabout capacity model.

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

Lane Queue Percentiles
Site: Greenbag Rd & Dorsey Ave-Kingwood Pike - AM Peak - Alt

Site ID: 857/81
Roundabout

LANE QUEUE PERCENTILES (VEHICLES)

Lane No.	Deg. Satn x	Percentile Back of Queue (veh) 50%	70%	85%	90%	95%	98%	100%
South: Kingwood Pike								

1	0.733	3.5	4.5	6.4	7.4	8.7	9.7	10.4
East: Greenbag Road								
1	0.744	3.8	5.0	7.0	8.1	9.5	10.6	11.4
North: Dorsey Avenue								
1	0.503	1.2	1.5	2.1	2.5	2.9	3.2	3.5
West: Greenbag Road								
1	0.066	0.1	0.1	0.2	0.2	0.2	0.3	0.3
2	0.383	0.8	1.0	1.4	1.7	1.9	2.2	2.3

SIDRA Standard models are used for Back of Queue estimation since HCM only gives Cycle-Average Queues for unsignalised intersections.

LANE QUEUE PERCENTILES (DISTANCE)

Lane No.	Deg. Satn x	Percentile Back of Queue (feet) 50%	70%	85%	90%	95%	98%	100%
South: Kingwood Pike								
1	0.733	88.5	114.6	161.6	187.1	220.0	244.2	262.5
East: Greenbag Road								
1	0.744	101.1	130.9	184.6	213.7	251.3	279.0	299.9
North: Dorsey Avenue								
1	0.503	30.7	39.8	56.2	65.0	76.5	84.9	91.2
West: Greenbag Road								
1	0.066	2.6	3.4	4.8	5.5	6.5	7.2	7.7
2	0.383	20.8	26.9	38.0	44.0	51.7	57.4	61.7

SIDRA Standard models are used for Back of Queue estimation since HCM only gives Cycle-Average Queues for unsignalised intersections.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

The US HCM 6 roundabout capacity model option is in use.
This model considers only the total circulating flow and not the flow rates in individual circulating lanes. To model the effects of flow distribution in circulating lanes on the entry capacity results, you should use the

```
  SIDRA Standard roundabout capacity model.

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

  The US HCM 6 roundabout capacity model option is in use.
  This model considers only the total circulating flow and not the flow rates
  in individual circulating lanes.  To model the effects of flow distribution
  in circulating lanes on the entry capacity results, you should use the
  SIDRA Standard roundabout capacity model.

ALL VEHICLES:			31.8	28.1	3358.0#	81.4#	1131.5	1131.5	40.2

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

----------------------------------------
  The US HCM 6 roundabout capacity model option is in use.
  This model considers only the total circulating flow and not the flow rates
  in individual circulating lanes.  To model the effects of flow distribution
  in circulating lanes on the entry capacity results, you should use the
  SIDRA Standard roundabout capacity model.

ALL VEHICLES:			34.8	31.5	3362.3#	72.7#	1153.8	1153.8	36.6

"Running Speed" is the average speed excluding stopped periods.

Travel Time values include cruise times and intersection delays including acceleration, deceleration and idling delays.

Travel Distance and Travel Time values include travel on the External Exit section based on the Exit Distance or user-specified Downstream Distance value as applicable.

Go to Table Links (Top)

Roundabout Flow Rates
Site: Greenbag & Mississippi - AM Peak - Modified 2

Site ID: 857-Miss
Roundabout

CIRCULATING LANE FLOW RATES

Lane No.	Circulating Flow Rate veh/h	pcu/h	Percent
East: Greenbag Road (CR 857)			
1	171	179	100.0%
Total	171	179	
North: Mississippi Avenue			
1	645	671	100.0%
Total	645	671	
West: Greenbag Road (CR 857)			
1	167	198	100.0%
Total	167	198	

The US HCM 6 roundabout capacity model option is in use.
This model considers only the total circulating flow and not the flow rates in individual circulating lanes. To model the effects of flow distribution in circulating lanes on the entry capacity results, you should use the SIDRA Standard roundabout capacity model.

EXITING LANE FLOW RATES

Lane No.	Exiting Flow Rate veh/h	pcu/h	Percent
East: Greenbag Road (CR 857)			
1	171	179	100.0%
Total	171	179

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

  HCM Delay Formula option used (Exclude Geometric Delay option applies). Control
  Delay does not include Geometric Delay, and Stop-line Delay is treated as being
  same as Control Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

CIRCULATING LANE FLOW RATES

Lane No.	Circulating Flow Rate veh/h	pcu/h	Percent
East: Greenbag Road (CR 857)			
1	203	205	100.0%
Total	203	205	
North: Mississippi Avenue			
1	539	549	100.0%
Total	539	549	
West: Greenbag Road (CR 857)			
1	59	59	100.0%
Total	59	59	

The US HCM 6 roundabout capacity model option is in use.
This model considers only the total circulating flow and not the flow rates in individual circulating lanes. To model the effects of flow distribution in circulating lanes on the entry capacity results, you should use the SIDRA Standard roundabout capacity model.

EXITING LANE FLOW RATES

Lane No.	Exiting Flow Rate veh/h	pcu/h	Percent
East: Greenbag Road (CR 857)

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

----------------------------------------

  The capacity values of Continuous Lanes are obtained by adjusting the basic
  saturation flow for lane width, grade, movement class and turning vehicle effects.
  Saturation flow scale applies if specified.

Flow rates shown above are Arrival Flow Rates (veh/h) based on the following input specifications:
Unit Time for Volumes =  60 minutes
Peak Flow Period =  15 minutes
Effects of Volume Factors (Peak Flow Factor, Flow Scale, Growth Rate) are included.
Arrival Flow Rates may be less than Demand Flow Rates if capacity constraint applies in
network analysis.

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

----------------------------------------
  The US HCM 6 roundabout capacity model option is in use.
  This model considers only the total circulating flow and not the flow rates
  in individual circulating lanes.  To model the effects of flow distribution
  in circulating lanes on the entry capacity results, you should use the
```

```
  SIDRA Standard roundabout capacity model.

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

  HCM Delay Formula option used (Exclude Geometric Delay option applies). Control
  Delay does not include Geometric Delay, and Stop-line Delay is treated as being
  same as Control Delay.
  dm: Minimum delay for gap acceptance cases
  dSL: Stop-line delay (=d1+d2)
  dn: Average stop-start delay for all vehicles queued and unqueued
  dq: Queuing delay (the part of the stop-line delay that includes
      stopped delay and queue move-up delay)
  dqm: Queue move-up delay
  di: Stopped delay (stopped (idling) time at near-zero speed)
  dig: Geometric delay
  dic: Control delay

Site Level of Service (LOS) Method: Delay (SIDRA). Site LOS Method is specified in the Parameter Settings dialog (Site tab).
Roundabout LOS Method: Same as Signalised Intersections.
Vehicle movement LOS values are based on average delay per movement.
Intersection and Approach LOS values are based on average delay for all vehicle movements.
Roundabout Capacity Model: US HCM 6.
HCM Delay Formula option is used. Control Delay does not include Geometric Delay since Exclude Geometric Delay option applies.
Gap-Acceptance Capacity: Traditional M1.
HV (%) values are calculated for All Movement Classes of All Heavy Vehicle Model Designation.

The US HCM 6 roundabout capacity model option is in use.
This model considers only the total circulating flow and not the flow rates in individual circulating lanes. To model the effects of flow distribution in circulating lanes on the entry capacity results, you should use the

```
  SIDRA Standard roundabout capacity model.

  "Running Speed" is the average speed excluding stopped periods.

  Travel Time values include cruise times and intersection delays including
  acceleration, deceleration and idling delays.

  #  Travel Distance and Travel Time values include travel on the External Exit section based
     on the Exit Distance or user-specified Downstream Distance value as applicable.

RE: Turn Lane Warrant Study
Greenbag Road (CR 857) and Bluegrass Village Driveway
City of Morgantown, Monongalia County, West Virginia

Dear Mr. Meadows:

Stahl Sheaffer Engineering, LLC (Stahl Sheaffer) has completed a turn lane warrant study for the Greenbag Road (CR 857) and Bluegrass Village Driveway intersection, which is located approximately 800-feet west of the Greenbag Road (CR 857) and Dorsey Avenue/Kingwood Pike (CR 81) intersection in the City of Morgantown, Monongalia County. This evaluation was completed to determine if turn lanes would be required at the intersection of Greenbag Road with Bluegrass Village Driveway and to incorporate these potential turn lane improvements in conjunction with the proposed Greenbag Road and Dorsey Avenue/Kingwood Pike intersection improvements. The following sections of this correspondence details the turn lane warrant evaluation of the Greenbag Road and Bluegrass Village Driveway intersection.

Study Area

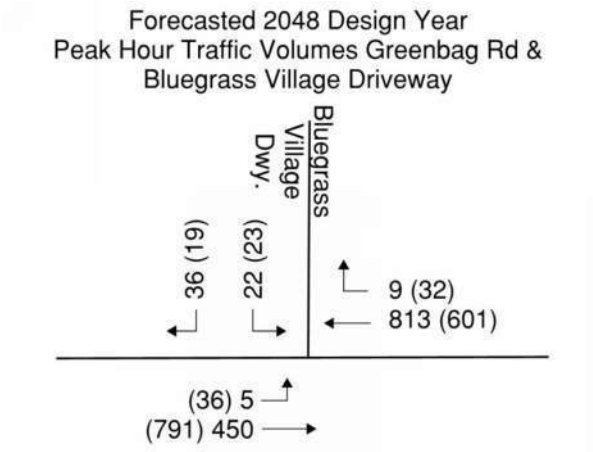
The intersection of Greenbag Road and Bluegrass Village Driveway is a T-intersection that operates as two-way stop controlled (TWSC), with a stop sign on the southbound Bluegrass Village Driveway and free-flowing on Greenbag Road. All approaches to this intersection currently provide a single lane to accommodate all applicable movements. Bluegrass Village Driveway provides access to the Bluegrass Village Mobile Home Park, which facilitates 186 mobile homes. An aerial image of the existing intersection and Bluegrass Village Mobile Home Park are included in the enclosure provided with this correspondence.

Traffic Volume Development

2048 Design Year weekday AM and weekday PM peak hour traffic volumes were developed for the intersection of Greenbag Road and Bluegrass Village Driveway through utilization of the following:

- Institute of Transportation Engineers (ITE) *Trip Generation Manual, 10th Edition*, Land Use 240, Mobile Home Park, to project traffic associated with the existing 186 dwelling units at the

Bluegrass Village Mobile Home Park. The anticipated site generated traffic volumes associated with the Bluegrass Village Mobile Home Park was projected as follows:



Development Component	Size	ITE Land Use	Weekday 24-Hour Traffic	Anticipated Site Generated Traffic Volume					
				AM Peak Hour			PM Peak Hour		
				Enter	Exit	Total	Enter	Exit	Total
Mobile Home Park	186 Units	240	1,019	14	58	72	68	42	110

- 2018 existing peak hour traffic volumes obtained from the *Greenbag Road Preliminary Investigation and Engineering (PIE) Traffic Study*, dated Revised February 2019, prepared by Stahl Sheaffer, to project the existing Bluegrass Village Mobile Home Park distribution. The 2018 existing peak hour traffic volumes were obtained from Figure 3, from the Greenbag Road PIE Traffic Study, for the intersections of Greenbag Road with Mississippi Avenue and Greenbag Road with Dorsey Avenue/Kingwood Pike. The vehicle trip distribution at the intersection of Greenbag Road and Bluegrass Village Driveway was determined as follows:

Direction	AM Peak Hour		PM Peak Hour	
	Entering Distribution	Exiting Distribution	Entering Distribution	Exiting Distribution
To/From West Via Greenbag Road	36%	62%	53%	45%
To/From East Via Greenbag Road	64%	38%	47%	55%
TOTAL	100%	100%	100%	100%

- 2048 design year peak hour traffic volumes for the intersection of Greenbag Road and Dorsey Avenue/Kingwood Pike obtained from the aforementioned Greenbag Road PIE Traffic Study, to forecast 2048 design year volumes along Greenbag Road at Bluegrass Village Driveway.

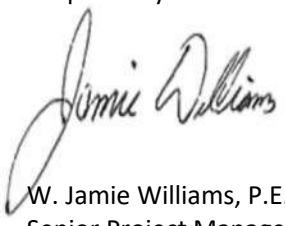
Based on the information detailed above, the forecasted 2048 design year weekday AM and weekday PM peak hour traffic volumes at the intersection of Greenbag Road and Bluegrass Village Driveway was forecasted as follows:

Detailed calculations summarizing the Bluegrass Village Mobile Home Park trip generation and distribution, as well as the forecasted 2048 design year weekday AM and weekday PM peak hour traffic volumes are included in the enclosure provided with this correspondence.

Turn Lane Warrant Analysis

Stahl Sheaffer evaluated left turn and right turn lane warrants at the intersection of Greenbag Road and Bluegrass Village Driveway in accordance with the procedure in the American Association of State Highway and Transportation Officials (AASHTO) *A Policy on the Geometric Design of Highways and Streets* and in the National Cooperative Highway Report Program (NCHRP) Report 457.

Based on this evaluation, an eastbound left turn lane is warranted during the weekday PM peak hour and should provide a minimum of 125 feet of vehicular storage, exclusive of taper. A westbound right turn lane is not warranted.



Copies of the turn lane warrant evaluation worksheets are included in the enclosure provided with this correspondence.

Conclusion

Based on the turn lane warrant evaluation for the intersection of Greenbag Road and Bluegrass Village Driveway, an eastbound left turn lane is warranted and should provide a minimum of 125 feet of vehicular storage, exclusive of taper.

This concludes Stahl Sheaffer's turn lane warrant study for the intersection of Greenbag Road and Bluegrass Village Driveway. If you have any questions, feel free to call or e-mail jwilliams@sse-llc.com.

Respectfully Submitted,

W. Jamie Williams, P.E.
Senior Project Manager, Stahl Sheaffer Engineering, LLC

Bluegrass Village Trip Generation

- Vehicular Trip Generation
    - Vehicular trip generation for the Bluegrass Village Mobile Home Park was determined using the average rates and equations contained in the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 10th Edition*.
    - ITE Land Use 240, Mobile Home Park, was used to determine the anticipated trip generation for the existing 186 Mobile Home Park dwellings.
    - Anticipated trip generation for the existing Bluegrass Village Mobile Home Park is projected as follows:
        - Average Weekday Daily: 1,019 Vehicle Trips
        - Weekday AM Peak Hour: 72 Total Trips (14 Trips Entering and 58 Trips Exiting)
        - Weekday PM Peak Hour: 110 Total Trips (68 Trips Entering and 42 Trips Exiting)
    - Vehicular trip generation summary table and calculations are included on the following pages.

Mobile Home Park

Description

A mobile home park generally consists of manufactured homes that are sited and installed on permanent foundations. It typically includes community facilities such as recreation rooms, swimming pools, and laundry facilities. Many mobile home parks restrict occupancy to adults.

Additional Data

The sites were surveyed in the 1980s and the 2000s in Delaware, Indiana, Oregon, and Virginia.

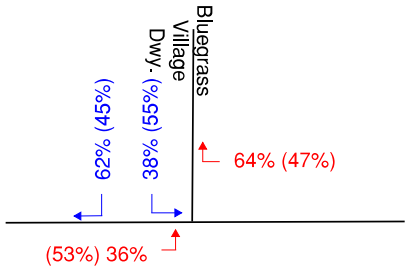
STAHL SHEAFFER ENGINEERING

Bluegrass Village Trip Distribution

- Vehicular Trip Distribution
    - Vehicular trip distribution for the Bluegrass Village Mobile Home Park was based on review of 2018 existing weekday AM and weekday PM peak hour traffic volumes at the following intersections:
        - Greenbag Road and Mississippi Avenue
        - Greenbag Road and Dorsey Avenue/Kingwood Pike
    - 2018 existing peak hour traffic volumes were obtained from Figure 3, provided in the *Greenbag Road Preliminary Investigation and Engineering (PIE) Traffic Study*, dated Revised February 2019 and preprared by Stahl Sheaffer Engineering.
    - Vehiclar trip distribution at the intersection of Greenbag Road and Bluegrass Village Driveway was determined as follows:



Direction	AM Peak Hour		PM Peak Hour	
	Entering Distribution	Exiting Distribution	Entering Distribution	Exiting Distribution
To/From West Via Greenbag Road	36%	62%	53%	45%
To/From East Via Greenbag Road	64%	38%	47%	55%
TOTAL	100%	100%	100%	100%

    - The vehicular trip generation for the Bluegrass Village Mobile Home Park was applied to the vehicular trip distirbution. The site trips entering and exiting Bluegrass Village was determined as follows:

Direction	AM Peak Hour		PM Peak Hour	
	Entering Site Trips	Exiting Site Trips	Entering Site Trips	Exiting Site Trips
To/From West Via Greenbag Road	5	36	36	19
To/From East Via Greenbag Road	9	22	32	23

2048 Design Year Peak Hour Traffic Volumes Greenbag Road and Bluegrass Village Driveway

- The 2048 design year peak hour traffic volumes at the intersection of Greenbag Road and Bluegrass Village Driveway were based on the following:
    - Forecasted site trips entering and exiting Bluegrass Village Driveway
    - 2048 design year peak hour traffic volumes at the intersection of Greenbag Road and Dorsey Avenue/Kingwood Pike, obtained from Figure 5, provided in the *Greenbag Road Preliminary Investigation and Engineering (PIE) Traffic Study*, dated Revised February 2019 and prepared by Stahl Sheaffer Engineering.
- 2048 design year peak hour traffic volumes details are included on the following page.

Forecasted 2048 Design Year

GREENBAG ROAD IMPROVEMENT PROJECT, MONONGALIA COUNTY, WEST VIRGINIA

STATE PROJECT: U331-857-0.67, FEDERAL PROJECT: STP-0857(019)D

Summary of September 29, 2020 Virtual Public Meeting Informational Workshop and Comments

Summary of Meeting

The West Virginia Department of Transportation, Division of Highways (WVDOH) hosted a virtual public meeting informational workshop to present the FHWA approved Environmental Assessment (EA) and receive comments for the proposed Greenbag Road Improvement Project. The project proposes improvements and upgrades to the Greenbag Road (CR 857) corridor between Jonathan Lane and ¼ mile west of the intersection with Mississippi Street. Previously, an in-person public meeting was held at South Middle School on April 16, 2019 from 4 to 7 pm. A summary of that meeting is available as an attachment to the EA.

The second meeting was held virtually on the publicinput.com meeting platform on September 29, 2020 from 5:00 to 8:00 PM. The meeting was available through the website or through a call in number. The decision to hold the meeting virtually was in response to the COVID-19 pandemic.

WVDOH advertised the meeting in local papers and via a message board sign along Greenbag Road. Postcards were mailed to all meeting participants and commenters from the April 2019 meeting who provided a mailing address. The notice was emailed to meeting participants and commenters from the April 2019 meeting who provided an email address. The Morgantown Metropolitan Planning Organization and the City of Morgantown posted notices of the meeting online.

During the meeting, information concerning the project design, preferred alternative, and the environmental assessment was presented at 5, 6, and 7 pm. Additional information was available on the publicinput.com website including plan sheets, the EA, frequently asked questions from the April 2019 meeting, and a WVDOH-produced video about the use of roundabouts. A comment box was available on the site both during the meeting and during the public comment period after the meeting. In addition to the presentation, WVDOH and consultant representatives were available during the meeting time to answer questions that were submitted via phone to the voicemail box or through the comment box. Questions posed by the public were read and answered during the virtual public meeting in order to provide information regarding the project to the community.

A 30-day comment period followed the public meeting, with comments due to WVDOH by October 29, 2020. Due to the number of comments received and the intensity of public involvement, FHWA extended the comment period for an additional 30 days, ending on November 30, 2020 for a total public comment period of 60 days.

Demographics

Of the individuals who commented both during the virtual meeting and during the comment period, there were a minimum of five hundred twenty-one (521) discrete commenters. One hundred forty four (144) comments were provided without any identifying information. Three hundred one (301) commenters listed a Morgantown address and an additional twenty-nine (29) were from elsewhere in WV. One hundred eighty (180) commenters did not provide any location information.

The WVDOH posted a survey question online asking how attendees had learned about the public meeting. Twenty-two individuals responded to the question and are listed below.

- Social media posts – 14
- Resident of the area – 3
- Email – 2
- Post card mailed from WVDOH – 2
- Website – 1

Total Comments

Nine hundred fifty-nine (959) comments were received by WVDOH. Of these, three hundred ninety-five (395) were submitted during the public meeting. The methods used to submit comments included:

- Website entry – 728
- Text message – 168
- Phone call/voicemail – 19
- Mailed letter/certified letter – 19
- Email – 19
- Correspondence with governor – 3
- Social media post – 2
- Petition – 1

Details for each comment are provided in Table 1. Comments and concerns are provided in Table 2. Where possible the comments are provided verbatim. Any comments that have been summarized are marked as such. Table 3 provides the response to comments.

Comments Summary

Of the total comments received, one hundred fifty-five (155 / 16.2%) were neutral to the preferred alternative design and included the answers to the WVDOH question about advertising, test comments from the presentation team, general questions, and requests for in-person meeting (15 comments). Fifty-three (53 / 5.5%) comments showed full support for the preferred alternative as presented. Seven hundred fifty-one comments (751 / 78.3%) expressed concerns and were not in support of the preferred alternative. Several common themes were identified throughout the

comments and are listed below. Many comments referred to more than one theme meaning percentages will exceed 100% when adding all comments.

- Roundabout (389 / 40.6%)
- Turn lanes (204 / 21.3%)
- Community garden/farmland (180 / 18.8%)
- Other alternatives (120 / 12.5%)
- Road maintenance (116 / 12.1%)
- Insufficient resource studies (124 / 12.9%)
- Safety (109 / 11.4%)
- Detour (100 / 10.4%)
- Virtual public meeting format (105 / 10.9%)
- Right-of-way concerns (93 / 9.7%)
- Large vehicles (92 / 9.6%)
- Bike/pedestrian (90 / 9.4%)
- Project not needed (65 / 6.8%)
- Schedule/budget (47 / 4.9%)
- Luckey Lane (24 / 2.5%)
- Mitigation (12 / 1.3%)
- Option G/petition* (8 / 0.8%)

*This number represents those who commented mentioning the petition.

A petition was created by local landowners to propose a fourth intersection option for the Greenbag Road and Dorsey Ave/Kingwood Pike intersection. The petition was signed by 1,115 individuals.

Table 2: Comments and Concerns Submitted

Please note that where possible comments are included verbatim. Any comments that have been summarized are marked as such.

Comment Number	Comments
1	The simulation shows four legs of the roundabout being two lanes wide but the roundabout is not a true two lane roundabout. Two parts of it are one lane wide. The actual roundabout that was built has two legs that are two lanes wide and two legs that are one lane wide. Which is how you can have a roundabout that is two lanes wide in some parts and one lane wide in other parts. You'll never see a roundabout built that has two lanes merging into one lane on a roundabout. It's a bad design and would not be built.
2	Options C and F. Keeps traffic flowing - one circle needs another to keep things moving.
3	email from South Park neighborhood association
4	N606 We do NOT need another roundabout in Morgantown!! Definitely don't need one on Greenbag Road.
5	I DO NOT agree with the proposed roundabout on Greenbag Road. Not only does it threaten the use of a resident's farm land, it also affects me as a resident of the Kingwood Pike area. The traffic light works plenty well, and a roundabout would only further congest the area. Look at the Mileground for example. I drive that area daily for work, and on some days, I sit in traffic for 30-45 min on my way home. I DO NOT want to experience that once, let alone twice in my commute. What would make my 20 minute (50 min in the evening) commute over an hour is not acceptable. Additionally, the area projected for the roundabout houses a community garden project that not only benefits citizens of the area, also has an environmental impact on clean air, pollination, and nutrition. I absolutely do not agree with the placement of a roundabout, and frankly I'm disappointed in the DOT for even suggesting useless expenses and frivolous spending of monies that could be well spent funding a number of road around the Morgantown area in bad shape-- Cobun Creek, Downtown Morgantown, Kingwood Pike, the Westover Bridge, and a number of other areas.

7	Facebook
8	Hello could u please acknowledge that our text comments are being received?!?

9	I drive this road on a regular basis and I do not think that a roundabout would be the best solution at the intersection. Turn lanes with directional arrows on the lights would be the best way to alleviate the traffic congestion. The turn lanes could be both for going right up towards the Pike and another center turn lane for turning left to Dorsey Ave. The same scenario in reverse for coming in the opposite direction. The turn lanes would keep the traffic segregated and moving better. I do not that a small roundabout would be sufficient or safe in this area with the type of traffic and trucks that travel this road. All the roads affected are single lane and the roundabout would not have enough space to merge to single lane with the big trucks.
10	I think we need to put the roundabout in From a WV resident recent graduate from WVU, with background in sustainable construction, Regional development. It would serve the community very well to go ahead with the project
11	Putting a roundabout and destroying farm land is not the answer. A simple turning lane would be more effective. I have traveled this road for 10 years and the congestion does not call for a roundabout. We need to preserve land in West Virginia not put pavement through vital farming land.
12	I am writing to voice my opposition to the proposed roundabout. Not only will the construction of said roundabout significantly disrupt the day to day life of many residents, businesses, school and houses of worship, it will negatively impact several established farms. I am truly lost as to why DOT/DOH wishes to undergo such a massive project, inconveniencing hundreds of people for a significant period of time when the issues at intersection of Greenbag/Kingwood Pike/Dorsey could be remedied with appropriate turn lanes and appropriately timed traffic lights. Last year, this project was met with opposition and I don't know why you expect this year to be any different. Rather than delaying the decision another year, with the hopes of getting your way, simply fix the issue in the most convenient way possible (turn lanes and lights) with as little negative impact on those of us who actually live here.
13	We do not need a roundabout at the end of the Kingwood pike a turn lane would suffice at most, we really need the hill slipped fixed permanently and not falling in. Maintain the current roads. People have navigated the intersection for years simply following rules of the road one can navigate the intersection. Traffic is not backed up any worse than at the end of Green Bag and 119 during the 4pm hour. Do a visual survey with actual number of vehicles and wait times at both sites will see the deficiencies.

16	Where's the chat window for the online comments???
17	A roundabout at the intersection of Greenbag Road and the Kingwood Pike is a wonderful idea! It would solve so many problems!
18	Facebook
19	Website
20	The owners of the farm this would impact
21	I am a resident of Greenbag Rd.
22	We live in that area

23	Post card
24	Do not destroy farm land for a roundabout!
25	We do not need another roundabout people in this town can't even use the one we have. Putting one on Greenbag Rd is pointless the road is fine without it. The traffic doesn't get backed up there like it does other places
26	I do not support the roundabout project at the Kingwood Pike / Greenbag Rd intersection. I live and pay taxes and travel in Mon Co every day and I do not want this roundabout. Use state road funds for actual improvement projects that help our county, not make it dumb.
27	No roundabout on Greenbag rd!!! Leave their farm alone!!!!
28	I am very against the round about the money can be better spent on road repairs
29	I think a roundabout on Greenbag road is a bad idea and a turning lane would better work. I don't believe it is fair to the farmland to take their farm away to use the land for something that will cause more accidents than it will help alleviate traffic
30	Strongly object to a roundabout at that area. Affects school, land, and topography negatively.
31	Our family is adamantly opposed to the roundabout on Greenbag road. We feel it's an inappropriate use of funds that could be used to improve our area roads instead. The Kingwood Pike needs repaired and I don't mean the bandaid repairs you keep throwing on it. The "problems" stated that would supposedly be fixed by installing a roundabout are not problematic. The amount of traffic in this area had been reduced from less Mylan traffic- them working remotely too. If you'd listen to the residents who travel this area EVERY SINGLE DAY you'd know that the only thing needed is a turning lane. Destroying farm land is not the answer. Do you even bother to consider how the lives of everyone living on the Kingwood Pike would be impacted? Rerouting travel down Aaron's creek- have you been on that road? It's narrow, unsafe and not meant for the amount of traffic that would have to use it. Not to mention the impact on those residents! I have a teen driver - I do not want her driving that road! We have lived on the Kingwood Pike for 15 years and travel that area multiple times a day. This area is not the problem. Please listen to the residents.

40	We live on the Kingwood Pike and want to express that we DO NOT want to see a roundabout put on at the intersection of Greenbag Road and the Kingwood Pike. We feel it would create many more traffic issues as well as destroying farmland and beautiful property. We feel a turning lane would be beneficial with traffic light arrows. The majority of the time there are not issues at this intersection. Rush hour times are the only times there are problems. Please listen to the people and consider alternatives. Again, we DO NOT want a roundabout forced on us at this intersection.
41	On Facebook

42	I am concerned about plans I have read proposing upgrades to the intersection of Dorsey and Greenbag Road. Here are my thoughts. I worked previously at the Dorsey Center near the intersection of Dorsey and Greenbag road so I have observed the traffic flow there for years. There are 2 situations that cause back-ups at the intersection. First, when school lets out at Mountainview and at South, traffic gets congested for a period of 30 minutes or so. Second, often cars turn across traffic to get onto Dorsey or Kingwood Pike. Since there is no turning lane, this creates a jam as cars wait for the intersection to clear. I have fewer observations at the Mississippi intersection but imagine that it is only school traffic once or twice a day that creates problems. Because traffic for most of the time is not congested on Greenbag road, just at school dismissal time, I would imagine a traffic light would suffice at Mississippi. At the Dorsey intersection, a center turning lane with a turning arrow light would keep the traffic moving and be a far less expensive and disruptive solution than a traffic circle. In order to accommodate the bus traffic, a large traffic circle would be required and would be no more effective than a light/turning lane.
43	My name is Lisa Keener. I live on the Kingwood Pike. A roundabout is absolutely not needed. It's ridiculous. I don't know who is profiting from a roundabout Kingwood. Pike is basically sliding off the hill and you think that you would be a little more worried about fixing that road instead of putting a roundabout and when all you need is a simple turn off. So with that comment, I'm definitely not in favor of the roundabout, and I don't know of anyone who is but we definitely do not want to around the belts at the bottom of the Kingwood Pike. Thank you.

46	Doesn't give a location for the meeting
47	Email
48	I spoke with you about a year ago regarding this project in Monongalia County. There will be an online meeting tomorrow I plan on watching but doubt I can include links with comments. I read much of the report and I am completely against a roundabout, let alone two. I don't even support turn lanes being installed if it would create a need for a detour. The road only gets backed up at peak hours which happens all over town anyway (all over America at 5pm really) and only takes about 10 minutes to get through at it's worst. There are only a few cars at a time at the intersection other times of day. A synchronized light would be sufficient too for peak times. Possibly a center turn lane where drivers have to yield won't take up too much room could be considered too. A roundabout will take acres of land. I do not feel it is appropriate when included as a designated heavy truck route. Just google the words, "Truck Rollover Roundabout" under news stories to see the problem nationwide. This is a very safe road where trucks are concerned and I would like to keep it that way. I would like to make 3 points since the last meeting: 1) I read the answers to previous complaints made in public comments included in the most recent report. The main one is the cost of this project when considering the deplorable conditions of our current roads in Monongalia County. My friends who drive for a living state Mon County stands out as the worst of all 55 counties they visit. Since you won't be visiting in person, enclosed is a photo of the Kingwood Pike side of the intersection. This was taken last week about 15-20 feet up from the stoplight. This hole is so deep that it requires me to get in the other lane to avoid it. It has been there for over 3 years. If you think this is bad so close to an intersection, imagine what the rest of the road looks like. For one, there is a slide that is still in need of repair about a 1/2 mile up from this. Much of the road up to the I-68 bridge overpass is collapsing and areas past the bridge are worn down to the gravel base. I drive almost 1 mile of 3 to get home in the wrong lane daily. The proposed detours, Aaron's Creek Road & Summers School Rd are 10 times worse than this photo. There is no way I will compromise my safety anymore than I do already by driving either of those roads. This will hopefully give you an idea why residents are so shocked and angered and keep bringing up "road conditions". (Odd that the MPO never addresses this much more important quality of life issue... What would $11 million dollars do to fix our REAL problems? Sitting 10 minutes at a stoplight only at 5pm won't destroy your vehicle). 2) There isn't a need to build

	sidewalks along Greenbag Road. There is no place to walk to other than one grocery store. It would be very inconvenient to carry groceries home and is completely unnecessary now due to recent public transit developments in the county. Mon County passed a levy last year paid for with our tax dollars offering free bus service for all county residents. Landlords are also provided free passes for their tenants. Greenbag Rd gets bus service multiple times a day on the current route. https://wvmetronews.com/2019/10/28/monongalia-county-taxes-learning-of-free-bus-pass-program/ 3) The MPO's initial meeting and surveys back in 2014 included very few people. Much less than the 200+ writing with concerns against this project. (BTW when holding public meetings, don't 200+ opinions count here?) Even the MPO's long range plan up to year 2040 considering future growth and development stated that a turn lane would be sufficient in their own report (see below). I would also like to add, this is currently one of the safest intersections in Mon County with the least accidents. (excerpt -pg 2 from MPO report) **Conclusion** *Alternative I, which provides exclusive left turn lanes with protected phases for the approaches on Greenbag Rd, has the most advantage in balancing overall safety and long-term operational efficiency. It would reduce vehicle crashes by 42% on implementation and reduce the intersection signal delay by 66% in 2040.* https://drive.google.com/file/d/0B8UM6dsVoQTIMk5OZnVQWXgzTk0/view https://www.plantogether.org/plans-studies As far as the 175 acre farm mentioned too, that was never developed and won't be due to utility issues. There is no natural gas on the Kingwood Pike. To further complicate things, any utilities (including water as Clinton Water Association can't handle that many additional homes) would have to be run under the interstate. The cost prohibitions caused the developer Dan Ryan Builders to back out a few years ago. These will continue to be long standing issues that any developer will face here so any largescale future home building in this area will be limited. Lane designation and signal timing is again mentioned here in the MPO's report. NO mention of roundabouts, detours, etc. are anywhere in this report. People justifiably feel blindsided. I would also like to point out that current signal timing WAS addressed (see below) and needs improvement. The DOH stated in it's latest report attached to the Sept. 29th meeting that signal timing was not even considered. This is not correct. (excerpt - pg 3) *The signal timing of the intersection is uncoordinated and is operated by pretimed control in which the cycle length, phase plan, and phase times are preset to repeat continuously. The southwest bound and northeast bound movements are allocated with 45 seconds green time and the southbound and northbound movements 35 seconds.* https://7b684dee-1ab5-4616-9992-9d54880108cf.filesusr.com/ugd/613794_26989372a58a4d1aa93dcdfd8da7179c.pdf I hope this sheds light on issues that are not being considered as far as I know. (Sorry in advance if any of this comes across as angry, rude or disrespectful. I am just in complete shock that such a large scale project is still being seriously proposed over nothing)
49	My name is Will and I'm a reporter for The Dominion Post. I am covering the meeting on the Greenbag Road Project. Can I please have the names and titles of the presenters? I caught Karen and Brain. However, I didn't get their last names or company.
50	Why can't the Kingwood / Dorsey ave roundabout shift closer to atomic grill location? It's current proposed location wipes out the conscience harvest field, which serves the community.
51	How much of the community garden will be taken for the project? What is the expected compensation for that land?
52	As someone who has lived on Mississippi Street for almost 10 years, I find the entire proposal absurd. Historically, roundabouts in Morgantown have been a disaster. The "Mileground" roundabout has literally made the traffic problem in that area worse than the stoplight that was there previously. That is even with more people avoiding that area. I work in the Senior Market, and have found a large number of people will drive longer distances to avoid that area completely. Now you are looking to implement the same thing on

	Greenbag Road just down from the Senior Center. So the roundabout will not affect the farm land? You mentioned no displacements. It seems like that farm will lose a large portion of that land.
53	What will be done to accommodate safe vehicle travel on Aaron Creek Rd. It is only a 1 1/2 lane road in terrible condition. Scary thought to have to travel that dilapidated road to get to town. Has additional money been appropriated to resurface and ditch the Kingwood Pike from the Greenbag Rd. to the Preston County line as the road is in ill repair and has been for years. This should take priority over the Greenbag road Roundabout Project, especially the Mississippi Roundabout.
54	This is related to the proposed upgrade of the intersection of the Greenbag Road and Kingwood Pike. The proposed Aaron's Creek detour is not fit for everyday travel. Poor road conditions, no guardrail, steep embankment, no room for two vehicles to pass. This route needs great improvement prior to becoming a detour for this project.
55	I am a resident of the Kingwood Pike. My family built here in 2005. Choosing this area for its proximity to our business, shopping and schools with the added perk of not being right in town. We have watched our road deteriorate and have bandaid fixes for years. Now this roundabout nonsense is being forced on us. I have so many concerns and for the first time ever fear for what this means to our family, all the residents of the Kingwood Pike, as well as for those living on Aaron's Creek, Cobun Creek and Summer School roads. Not to mention all those that depend on traveling the Pike from Preston County to access work in Mon Co. I'm begging you to reconsider. I fear for my teenage driver going to school and work on a very narrow, unfit road. For my husband who will not be able to access our business on the Greenbag road without going many miles out of his way and adding 20 minutes to his commute (a drive that is normally 3 miles). I fear for the safety of the children on the school busses. Do you really expect bus drivers to endure that? How bout the trucks delivering and transporting goods. This is an unfair, unwanted, unneeded solution. PLEASE listen to the taxpayers we do not support this plan. Fix our roads and install turning lanes.
56	Hello this is Josh
57	Hey team, nice work with meeting prep, look forward to tonight's meeting
58	Test comment - public input.com
59	Good evening! I have noticed the farmland at the corner of Dorsey Ave and Greenbag Rd is not being addressed or mentioned at all. What is the reasoning/ benefit behind this farmland being excluded from the study?
60	I personally know of at least 3 different families that are currently farming this property and have been for a decade or more to my knowledge.
61	Again. Why are we excluding the farmland property at the corner of Greenbag and Dorsey? It clearly shows on the map that this property is being overlooked. The farm is literally directly where the center of the proposed roundabout would potentially be built.
62	These farmlands have not been mentioned throughout this presentation. I am very curious as to why.
63	How will pedestrian crosswalks be safely operated at the locations of the proposed roundabouts?
64	Where do you propose the farmers that are currently farming in the area grow their food and medicine?
65	How do I access the minutes for this meeting? Comments/ questions/ and answers.
66	What about surface water drainage increases and localized flooding issues on the East side of the Dorsey Ave/Kingwood Pike intersection?

67	As a citizen and taxpayer in the great state of West Virginia, I am formally requesting an explanation as to why the farmland in this proposition is being excluded. I am not referring to the Campbell property. I am referring to the Hastings property. It is the site of Joy and Hemp Universal as well as Mocking Hill Farms as well as the Conscious Harvest Community Garden. Project. None of these businesses or organizations have been mentioned.
68	Why has the farmland on the Kingwood pike Greenbag road corner been ignored on the maps? The maps need fixed to address these impacts
69	Why haven't the two options (4 way stop and changes to the existing traffic signal) been studied? These are the only that don't destroy people's properties
70	Why have the two businesses on the pike/Greenbag road corner been ignored on the map?
71	Why do you think Aaron's creek road is an acceptable detour?
72	Why do you think a roundabout is safe at the bottom of a hill (Kingwood pike)
73	How will the noise and light pollution of all of the options affect the residences bordering the project?
74	Why haven't a study been conducted on the negative affects of noise and light on the neighboring hemp farm plants? Light and sound is harmful for hemp plants outside of their cycle, this should be considered.
75	How will construction debris be contained to ensure chemicals are not penetrating the soil of the farms at this location?
76	It is my understanding, that this intersection, as is, is a low accident intersection. Why fix what isn't broken?
77	I request an in person meeting in place of this virtual meeting. Many people were unable to attend due to the complicated nature of "attending" a virtual meeting
78	Many people's voices were lost today as a result of today's virtual meeting. Many people on the pike and Aaron's creek are elderly and don't have the ability to attend such a technology advanced meeting
79	I request that the first question asked in the first part of the meeting be answered again. Addressing the farm land not being mapped on the corner. There was a technical glitch and that question was not fully answered
80	A four way stop is the best option for this intersection
81	Traffic is only bad here for 45 minutes on weekdays at 5oclock
82	Many other roads need fixed with this money
83	The pike roads should be fixed before this intersection should even be considered for construction
84	Aaron's creek roads should be fixed before this intersection should even be considered for construction
85	Aaron's creek cannot handle a detour of this size and length of time
86	The road behind south middle that connects to Marjorie gardens should be reopened to the public as a solution for congestion
87	The closure of the road behind south middle to Marjorie gardens adds To congestion that should be opened before an intersection construction be considered
88	Roundabouts are not sufficient in West Virginia. This is at the bottom of a hill, very dangerous. They are being removed in New Jersey. How have the removals of roundabouts in New Jersey been considered in this project?
89	The roundabout at the mileground has not fixed its congestion issue, how would a roundabout here be any different? This is proof they don't work

90	Why would We spend 10 million dollars of money that we desperately need on road maintenance toward an unnecessary roundabout?
91	The DOH promised turning lanes in 2006 at this intersection, why hasn't this been addressed? Lack of funds we the excuse in 2006, but we have the funds now. Why isn't this being addressed?
92	Do our voices have merit? What do we have to do to stop this?
93	When is the in person meeting?
94	This meeting has so many technical issues and is confusing, the people demand an in person meeting
95	Why aren't we holding this project until we can meet after covid?
96	Can you define delineated?
97	Why was the EA not complete? It does not include a West Virginia department of Agriculture licensed hemp farm
98	This is an unfair meeting, we demand to hold off until a public meeting can be held
99	People's voices aren't being heard so hold off on meetings until we can meet in person
100	The project should be delayed if the public can't be included at the meeting
101	What person(s) and/ or organizations are accountable for the information provided in the "studies" that are being referred to?
102	why are you not responding to phone calls?
103	This is an unfair way of meeting, why should the project go on, if people are unable to attend?
104	We should delay the project until the people can be heard
105	People can't be heard on this platform this is an extremely shady and inefficient meeting
106	Are phone calls not being answered?
107	why are you not addressing the fact that there are three businesses that reside on the corner of kingwood pike and Greenbag rd?
108	Where's the public chat room?
109	I need help logging on
110	Can someone help me log in?
111	what about the people in the air?
112	aye?
113	what about the people in the queue
114	If there's so many questions, can we hold off on this meeting until people can actually attend and be heard in person?
115	We feel unheard with this meeting
116	the third option is in queue and to be answered on the live via the call
117	A lot of my questions haven't been addressed, how will you address my questions that will not be answered in this meeting?
118	How much money have we spent on billable hours to stahl Shaffer on a project with unattainable options?
119	I'm sorry but I'm having a hard time understanding the people when they talk, Will you guys please slow down in your verbiage?
120	We need another EA, we do not believe the aquatic study was conducted properly and ignored many key points.
121	please answer the one singular person waiting in the queue
122	Are our questions being considered in real time or are the answers already formulated?

123	I'm sorry but I cannot understand what the gentleman is saying who answered questions. Could he please repeat?
124	the presentation is the same every time. why even go over it again? why not just let that the last two hours be just questions
125	we don't need the presentations again
126	we need the questions answered
127	We reported that y'all aren't answering the *3 live answer question. Our complaint was recorded by operator 919 at 645 pm at Mecca. For not taking the live calls, this meeting is void and theft
128	The live answer question *3 were parameters of this meeting that you are not complying with.
129	How have only 6 questions been addressed?
130	There is information in this presentation that is in direct conflict with the taxpayers and citizens of this community. Some of the information is false and misleading. How can this be properly reported to Federal Authorities?
131	I've asked at least questions myself, and I can't be the only one. We move for halt of this project and demand an in person meeting
132	My grandpa doesn't have internet or phone, how can his voice be heard?
133	My neighbor threatened suicide from years of stress due to this project taking their lands
134	I can't understand what he is saying
135	What was the response to the 2006 turning lane question I sincerely can't understand what he said
136	why haven't any of my comments been answered
137	there are three business farms that reside on the corner of kingwood pike and Greenbag rd
138	you will ruin their lively hood if you start this project
139	Why wasn't the impact to farmland considered on the EA?
140	How are comments weighted? If y'all get enough comments will the project be stopped?
141	I've spoken to over 100 people who are all against the roundabout
142	Multiple people have been waiting to get on the line y'all aren't answering questions
143	this presentation is monotonous
144	This is unfair you're not letting the people speak
145	we didn't need it again for a third time
146	the last two hours should have been questions and comments only the presentation is far too long and you don't allow enough time for the questions and comments to be addressed
147	What's the point in having option 3? We've been waiting for 40 minutes on option 3 this is not fair you're ignoring people's questions they haven't even been heard! Not even one word spoken
148	Will u address the fact that you're not answering *3?
149	We have reported fraud with officer Phillips at 745 pm for you not taking public questions on *3
150	Two separate people have been in line one and two and y'all have not answered them to be heard
151	The disregard of public comment has been reported to the sheriff

152	The vast majority of participants after the last meeting (over 200) are against this project. It does not help confidence in the public comment process that this project is still being forced upon us after considerable public outcry and complaints. What will stop the project from continuing at this point?
153	I am invested in property in the area the is being committed on! I was told I was number 2 on the list and I've waited 40 minutes and have yet to speak! I need answers NOW! I need my concerns addressed Now
154	Lieutenant Burkes has been notified of this fraudulent meeting, not answering *3 calls while lying and saying you are. Frauding us out of our comment opposing the stealing of our land and business. Cheating us out of money. 7:17 report
155	oh did I get removed from commenting
156	there are eagles nests in the area
157	I guess you don't receive picture mail
158	Why was the landowner not notified of the virtual meeting?
159	Do you understand the implications you've had on the landowners family?
160	Do you guys work for satan?
161	Multiple business owners have been affected by you're refusal to answer *3 comments
162	Why aren't questions being answered on *3 why is this an option if you're not answering?
163	This is fraud that people can't speak during the meeting
164	It is fraud because by not taking our comments, the effect of that is stealing our land because our opposition wasn't heard. If this results in construction because our voices weren't heard, that's frauding us out of our property and business money. Legal action will be taken. Complaints have been filed this is wrong it's been 2:30 hours and people still haven't spoken
165	You may want to Address the fact that *3 isn't working
166	do you know how much of the community you damage by putting in the roundabouts? because it's a lot! it's local produce being provided for farmers markets and to local restaurants in the area. it's cbd for people who need to feel less anxiety, the same anxiety you are currently causing me and my loved ones by even proposing a roundabout. we have already gotten the law involved and we will get a lawyer and fight this to the end! mark my words! the land you want to touch is sacred to loads of wildlife, you will be ruining their habitats as will in the process. it's not like they have leases and know when they need to move. you uproot wildlife families and surrounding human families! also your thousand page document doesn't address very many questions or comments from the april 2019 meeting. the land owners are severely confused and appalled by this!
167	I watched the 5:00 traffic while on this meeting from the site. It was backed up on one side for 15 minutes. This slight inconvenience does not warrant a 10million dollar roundabout, the destruction of farmland, our businesses and our livelihood
168	Are you really not answering anyone on the phone? I've confirmed with 4 business owners they've been in line for HOURS
169	why has this meeting been silent 90% of the time? We demand a public meeting after covid. This meeting wasn't even a meeting
170	It's impossible for you to be answering questions and transcribing them if you're not answering them!
171	How can u transcribe when the person hasn't even gotten a chance to speak? That's a lie
172	The question asking about information already presented is completely inefficient
173	You just address that you're not live comment at 7:45

174	You JUST ANNOUNCED with 15 minutes left in the meeting that you're not taking live calls *3. Why have the option? You cheated dozens of people out of their comments by lying and saying they could live comment on *3
175	What percentage of questions have you answered?
176	What is the expected completion date of this project?
177	maybe people need to be a little more patient, leave at an appropriate time from their houses or work to get to the next place without feeling rushed. if everyone could chill out and be a little more courteous on the roads then maybe we wouldn't be having any of these meetings! maybe there would be a problem here
178	Has the proposed budget been accepted? If so, how much will be coming from federal and state funds, respectively?
179	2
180	this is what your trying to do to this community I hope you received this picture
181	20 basket and I would like to make a comment that I don't think the roundabout should happen at all. The congestion is never that bad. I travel a road daily, but I do believe that there should be sidewalks put in on that road. I know that people walk along those along Greenbag Road quite frequently and took the Avenue and those two roads should definitely have sidewalks dislike Million Dollar Round about projects that you guys want to complete wage are profound. They don't need to actually have it at all in my opinion. oh, I just I just hope that we can all agree that they're a bit too much. The roads are perfectly fine. The way they are. I mean, there's potholes everywhere and those could be definitely be addressed but Like I said, the roundabout is just not it's not going to fix any issues. It's actually going to create more issues. They recently just removed around about in New Jersey and because it was creating issues. So yeah, maybe take that into consideration that one of the states that was like really Pro round about is not taking it out. So, yeah, thank you, and I can't wait for the meeting at 5. I hope you all have a great day
182	This is josh. This is a test comment.
183	Test comment
184	Example private comment (5:22)
185	Testing the comments.
186	Karen Reed - Markosky Brian Hoffheins- Stahl Sheaffer Engineering
187	I used Google Chrome and I now see the Comment Box
188	I prefer option c on Mississippi intersection; option F Dorsey Ave/kingwood.
189	Aaron Creek Rd and Lower Aaron Creek Rd are not suitable for excessive traffic. Will they be Improved for this detour?
190	I live 2 miles up the Kingwood Pike and I work at the Prison complex. The detour you propose it's absurd. I moved where I live for the convenience of Morgantown and where I work. The Aaron's Creek and Lower Road are single lane in most areas and with this increase in traffic volume will be a highly dangerous route of travel. Will access to Greenbag be available in early morning hours at least? Like before 6 am? AND for the record, roundabouts are awful, the only thing needed at the intersection are turning lanes, but I see y'all don't care what tax paying community members think.
191	How large are these roundabouts? Larger than the one on Mileground Rd I hope!

192	Why did the EA fail to address the harm caused by the preferred alternative F (roundabout) to the Conscious Harvest Cooperative non-profit organization as well as the destruction of farmland utilized by the local business Joy and Hemp Universal LLC?
193	An adverse condition of enhanced access for Dorsey Avenue from the intersection of Greenbag Road Design Option F and from Don Knots Blvd can be found in studies and traffic modeling which use Lucky Lane; From start of project and once completed there will be a greater amount of vehicle noise, larger trucks accommodated on Dorsey Ave, means more noise and heavier traffic volume. One condition would be additional traffic noise from Dorsey Ave. QUESTION: Would reducing speed limits on Greenbag and Dorsey Ave be considered in the process? I strongly disagree as a resident of Apolla Drive on Opt. F being best ideal design. I currently see a huge amount of thru-traffic through my neighborhood. Allowing trucks, and more heavier traffic volume means that when vehicles back up for school on Lucky Lane, the flow will be even more through Apolla Drive. This impact on Opt F will only serve as a higher percent of vehicles cutting through Apolla Drive, added service calls to Mon County Sheriff (due to speeding and traffic back ups), and is not in my opinion a preferred solution. I would settle on Option E, but NEVER on Option F. The school sees a steady flow of traffic in morning and afternoons, Opt. F does not take that highly into consideration. Question: Was Don Knotts Blv the preferred route for heavy trucks in the past? And why is that not taken into the process?
194	I wish to know what type of sound studies were collected on Dorsey Ave and corner of Apolla Ave. This project will severely impact future road noise and through traffic by encouraging more traffic to use the Pike/Dorsey intersection. What will be done to curve the noise and traffic if this project goes through. Is a cement wall as a noise barrier at corner of Dorsey and Apolla Ave something that will be built? If not, it should be, the noise as of current is well beyond normal range for a feeder road such as Dorsey Ave.
195	The amount of traffic on Dorsey Ave near Apolla Drive where I reside is my main concern, in addition to additional traffic flow that Apolla Drive already has flowing through it before project.
196	The phone line has gone silent
197	The report says no businesses would be relocated. The local business Joy and Hemp LLC would potentially lose the ability to operate without their farmland that would be taken by the roundabout. Why was this not considered?
198	A major concern beyond pedestrian safety, is that of encouraging more commuters to use Dorsey Ave instead of Don Knotts Blvd to access downtown. As of today cars are still barring down Dorsey Ave well beyond the speed limit, and beyond what the road was designed for engineering wise.
199	The environment assessment leaves out businesses that will be destroyed by the roundabout option
200	Hello, my name is James Cress and this is from the fresh mint Indian Grill from Morgantown West Virginia. We are very much particular about this form and we also buying a lot of vegetables and the garlic and everything. They just love this place and they are amazing. And then also they grow so many things and natural organic. So we are really very practical to have this and have to keep this form. That's what we like to support, and we just wanted to keep this forever for the public to buy everything and people also had a fresh grown vegetables in the area. So we are very happy to keep this. Please try to save for the public and for us and for everyone. We are grateful to see this always. Thank you very much and have a great day in my name is James West Palm. If you have any questions, call me back on 412-996-6557. Thank you very much. Have a good day.
201	How can you take the farm business on the southwest corner and not allow these WV farmers to continue to making a living and providing for their families and their future?
202	Why is farmland that is being utilized by multiple families, a profitable business, and a non profit organization being excluded? I'm referring to the corner of green bag road and king wood pike.

203	2 For Profits Agriculture businesses currently operate on the farmland on the corner lot, including a WV licensed hemp farm. There is no mention of this in the EA
204	What is the timeframe proposed for closure/access to Greenbag road for travel to the prison?
205	None of the other roundabouts in Morgantown have alleviated any traffic congestion because the root cause of the traffic was never addressed. Please expand on the underlying conditions that would justify a change in the intersection.
206	Why is the construction of the roundabout on the mile ground include an elevation change? It makes traversing the roundabout awkward and dangerous.
207	Now are they going to accommodate the detour traffic on Aaron's Creek Road? It is only Elena and half with terrible ditches at this point in time. The name is Candice. An additional questions have anybody considered accessing the interstate at the Kingwood Pike overpass bridge at the interstate to alleviate traffic control going to cross section might be an alternative. The intent is 304-296-3064 is my phone number. Thank you.
208	My name no. I live in Dorset Avenue for about twenty years. I go back and forth in this section month old this time. I use it a lot during the day and my comment is I think it's the round about it is very often a big waste of money and land most of the countries like third world countries, even they get off the roundabout and we I think it's the best way to plan our city or a future month. So all you need instead of the round about all we need we need just to put a third line will be a middle line to a neighbor who come in Thursday. From Green Bag road to turn to Dorsey Avenue and the other side of that added track it just an error like a big city just the 3rd line. It's just it's another big construction. It's an easy construction adding a third line to the road each Road like Greenburg Road and Dorset Avenue in Long by with whatever who's going to turn going to be in the middle and turn that's easy and cheaper save money for the city and save time for us and keep us from this all long time of detail and construction take off a month in Big Money Train out of the city budget. So this is what like a new cities designed like that wage. And no waste of land and property and money. Thank you. I wish you success.
209	What residences would be displaced by the roundabout? It is not clear on the map.
210	Will the speed limit be reduced in order to create safer passage through a round-about at Pike/Greenbag intersection? If so, what will the speed limit be? What consideration was made to encourage through traffic from 119 to use Don Knotts Blvd instead of re-routing it through Dorsey Ave and Greenbag Road which will cost more money, when there is already a solution in place, i.e. Don Knotts from Grafton Road and 119. Missi. design makes sense to me, but not the intersection of Greenbag/Pike. May need to rethink your inks there. Opt E may be a decent option.
211	What residents would be displaced on the non-round about options?
212	What could be done to help educate the public on proper roundabout traffic etiquette. I have experienced many near collisions due to inexperience with roundabout use.
213	I am hearing there will be measures taken to increase flow of traffic on Dorsey Avenue, yet, what are the measures to reduce the noise created by the increase in traffic volume that such a new design? which will surely encourage once project is created and after a long disturbance is created in route routines.
214	The moderator does not appear to be fielding comments regarding the community garden or local business Joy and Hemp Universal LLC affected by the roundabout. Why not? This is unfair to the participants
215	What measures have you considered in order to be certain prison staff can respond at the prison when called upon in emergency situations?

216	As someone who has lived on Mississippi Street for almost 10 years, I find the entire proposal absurd. Historically, roundabouts in Morgantown have been a disaster. The "Mileground" roundabout has literally made the traffic problem in that area worse than the stoplight that was there previously. That is even with more people avoiding that area. I work in the Senior Market, and have found a large number of people will drive longer distances to avoid that area completely. Now you are looking to implement the same thing on Greenbag Road just down from the Senior Center. So the roundabout will not affect the farm land? You mentioned no displacements. It seems like that farm will lose a large portion of that land.
217	Why do you think Aaron's Creek road can handle the detour traffic? Will DOT fix Aaron's creek prior to detour start?
218	How are the three phase distribution lines which run along the roads be rerouted?
219	There is a lot of talk about creating Opt. F for Pike/Dorsey Avenue, why is Opt E not being addressed further as a solution? What logical reason can you present, that would direct a project at Pike/Dorsey/Greenbag Road, when large tractor trailers and vehicles can access downtown through 119, and Don Knott Blvd?
220	What happens if the property owners refuse to give up their land?
221	How does a +$10M roundabout constitute a one letter grade on the intersection solution?
222	I understand the safety components within your considered design. Such as sidewalks and turn out lanes, this is very reasonable. However, to encourage large trucks and vehicles to use a 'feeder road' such as Dorsey Ave to filter such heavy traffic, where is your logic there and please explain in simple terms? Keeping in mind that traffic from 68, North and South bound currently use 119, and Don Knotts Blvd, so why spend extra money and create a new route, when one is already created and in place now?
223	This is no foresight again with Dorsey Avenue live in Dorset Avenue. Now question why we cannot have our intersection like Greenback roll with Kingwood Park and Dorsey, same as the one Patterson Drive with University Avenue. It's a very successful intersection and a lot of traffic in it and very fast and the way they did it weigh much better and cheaper than than going to go as the office round about
224	Wouldn't a turning lane on Greenbag Road at the intersection of Dorsey Ave and the Kingwood Pike be cheaper (and safer) than a roundabout?
225	Why is the money going towards this project instead of fixing and paving the roads, especially the Kingwood Pike?
226	Deb cantus question what will be done to accommodate heavier travel for the vehicles on the errands Creek detour off? It is only a 1 and 1/2 Lane with terrible ditches.
227	This seems like a lot of wasteful spending to reduce traffic that just isn't there 99% of the time. Also is it true that large trucks will be diverted from going downtown to going across the Greenbag instead?
228	I just want to make a comment concerning this round about first off the bath. Has anybody considered used in the access the interstate via that came with Pike bridge to alleviate traffic coming out of Preston County going to Morgantown in alleviating the intersection in addition to that. I'd like to know if the funds for this roundabout could be used with turning lanes and put some of the funds into palm of the Kingwood Pike. That's an e repair the roads in terrible condition. The dishes haven't been cleaned out in years and the pike itself needs to be resurfaced all the way to the Preston County life. So, you know, those are a couple concerns I think is more pressing than a roundabout at the Greenbank Road is to maintain their current roads.And and yeah, you know, it's I think it's more important than the spending this money at this roundabouts of Mississippi Street, and we need to maintain what we go out before we start another Avengers. Anyway, thank you for your time. And if you want to take a ride up that came with Pike and you can see what I'm talking about. Goodbye.

229	I have listen to the presentation and Q&A after, yet, the question of why, and what concrete evidence to re-route traffic such as heavy trucks and delivery trucks and to accommodate them through greenbag/Pike/Dorsey Ave. Dorsey Ave was never created to handle the amount of traffic. Why are designs focused on creating accommodations for more traffic on Dorsey Ave, when 119 from 68, and through Dont Knotts are already in place. Why spend more money on a project that already has a soultion in place, which is Dont Knotts. Please explain the logic?
230	At the intersection of Mississippi Ave and Greenbag Road, a stop light intersection may work better than a second roundabout, as well as take up less space and cost far less.
231	As a tax payer, long time resident, and concerned citizen of Morgantown, I do have a few questions; 1. Why is Greenbag Ave-to-Dorsey avenue traffic design as an alternative even being considered when a completely proper route to downtown already exists from 68, via 119, to Don Knotts Blvd? Please explain why an Option F should even be mentioned as an alternative? Please keep in mind that Dorsey Avenue was never intended on filtering high volumes of through traffic, but rather neighborhood traffic only. Per county design historically. 2. When is the estimated begin of construction, once this projected has reached a final conclusion? 3. Will speed limits be reduced along Dorsey Avenue entirely to reduce noise, and potential vehicle accidents? If so, what will the new speed be, and how will your company make final recommendations for such?
232	Why was the EA not complete? The EA leaves out productive agriculture land at the corner of the greenbag rd/kingwood pike
233	Why was the farmland at the corner of Greenbag Road and the Kingwood Pike not considered productive farmland? I have seen that a large portion of that area (which is the majority of the area taken up by the roundabout) has been farmed for years.
234	The Cultural Resources section of the EA is incomplete. The historical nature of the lots in the land displaced includes some areas in the city. Including the corner farmland which is part of the City of Morgantown.
235	We request the Dorsey/Kingwood Options of D,E,F Design Review be Reviewed by a third party engineering firm.
236	More and more American's are working from home. We request a review by a third-party to assess the alternatives need for differing schedules for the schools day schedule.
237	Hi I live in Bluegrass Village. A few yards from the intersection of Greenbag Rd & Dorsey & Kingwood Pike. I would approve widening that intersection but to put a round about there is overkill. And would certainly affect the quality of life of all the residents who live in Bluegrass Village. The round about at the Mileground was unnecessary. A round about at Dorsey/Greenbag/Kingwood Pike would take the land that is importantly used for community gardens. This is a healthy, productive use of this land.
238	The Wetlands across from the Bluegrass Village has not been properly assessed. The citizens request a review of other native endangered species.
239	MMMPO's studies to not represent the current working environment of 2020 and beyond.
240	Option C at Mississippi appears to be the most expensive option with limited performance
241	Dorsey Ave/Kingwood Pike is currently a letter C. Not bad :) An Arrow would help easily.
242	How long/tall will the retaining wall be at the southeast corner of the kingwood pike roundabout?
243	Option F at the Kingwood Pike intersection is the most expensive option.
244	Roundabout would not improve the letter grade much....?
245	That's sad

246	Why are you pushing Roundabouts?
247	The truckers coming down the pike do not want a roundabout.
248	What guarantee is there that the hillside at the kingwood pike roundabout will not slip, as it always has in the past, causing damage/loss to the historic home at 27 Kingwood Pike?
249	The cost of the roundabout at the kingwood pike would destroy 100 year old farmland and destroying a WV Hemp farm and a local family's livelihood.
250	Do you feel that Dorsey Avenue is able to safety handle big rigs, large tractor trailers and large trucks, especially during inclement weather? Keeping in mind that that road is steep and windy as well. Please use Option E for Greenbag Road to Dorsey Ave. Left/Right turn lanes, if this project goes through, it is the only one that makes sense. Why encourage more potential accidents on Dorsey Ave and at the intersection of Pike/Dorsey? Yes, there are other round-bouts elsewhere in Morgantown, and they back up very often. Please explain how your design will cost the tax payers of Morgantown less, when accidents, and other delays will happen due to a local road such as Dorsey Ave?
251	Why was an alternative to NOT include turning lanes on Dorsey and Kingwood Pike, while providing center turn lanes on Greenbag not explored? This would not disturb any residences, reduce construction costs, and address the real problems on Greenbag road.
252	When is the in-person meeting?
253	what happens if the property owners refuse to sell their property for this project?
254	Short and sweet; when construction is happening how will you truly mitigate and prevent traffic detoured from project through Lucky Lane and Apolla Drive? Apolla Drive is a small, poorly maintained residential feeder road; how will you prevent large amounts of traffic from turning into this street, when Lucky Lane is backed up due to construction traffic, accidents and school events? This sounds like a very bad idea and planning to me.
255	the detour if using Arins creek road is outrageous. It is unsafe with no guardrails. Winter would be a total nightmare. Is Aaron's creek raod going no be repaired first?
256	My neighbors couldn't make this meeting. The internet is out because of the storm.
257	I vote for the no-build alternative!
258	Can you hear me? Where is the public comment chat?
259	Will law enforcement be present to ensure commuters use Lucky Lane as the detour, rather than flooding through Apolla Drive during any construction? A no build on Dorsey/Pike is my hopes. Thank you.
260	Even though a light/noise study was not required for this type 3 project, what steps/considerations are being taken to mitigate the disturbances by the increased level of traffic being directed at the 27 Kingwood Pike residence? Current distances from the intersection to the home will be cut in half from the outer edges of the roundabout radius
261	Would you agree, deletion of turning lanes on Dorsey and Kingwood Pike, while adding lanes on Greenbag is not the same as a no build alternative?.
262	Are you taking phone calls? There are people on the line
263	at least one person we know of...
264	We should delay the project until the public can be included. The local people will be impacted and need to know this information.

265	Where is the public chat room?
266	If someone wishes not to give up their property and it is forcefully taken it is a crime. If that property value exceeds a certain monetary value it is larceny and or grand larceny a felony crime. Our resources are continually being stolen and sold back to the community. The state can kill over property. But citizens cannot? If people gotta sit in traffic a little longer who cares. That intersection is not that busy. How about a better public transport system? Oh but then the state cant get that fed money. That same fed money Justice got and dispersed to his buddies for the covid fiasco. Were tired of being hood winked we are not cattle we are not animals we are creations of the God of nature, not the god of the state. Were are awake thank you.
267	I didn't understand that. It says there is a live que phone option.
268	Will you take phone calls next hour?
269	Tom Richards landowner long green bag Road would like to know why the proposed roundabout at the intersection of green bag Road Kingwood. Pike is being proposed on alluvial soils that are determined to be unstable since the construction of the green bag Road the 1960s. I think this is detrimental to the property at 27 Kingwood Pike, and we've already lost five acres of land to construction a green bag Road in the 1960s. Thank you.
270	I would like to voice my support for alternatives D and E rather than the preferred alternative F, being the roundabout. First, this area is the only community garden I am aware of in Morgantown on a 100+ year-old farm. Although it does not meet the legal definition of "productive farmland" it does produce a harvestable crop. In fact, this area is productive enough that one individual received a felony for stealing the crops planted there. Second, many drivers in Morgantown are not great at driving in roundabouts, and I could easily see this becoming an issue for tractor-trailer drivers coming off of the Kingwood Pike or making a wrong turn from many of the businesses on Greenbag Road. Although you mentioned this has been considered and mitigated, I see this issue happening commonly at the roundabout on the Mileground. Another option would be to move the roundabout in alternative F to the opposite corner, which would take up a former restaurant which has now been vacant for over a year. Thank you for your consideration.
271	Is that a human or a robot..! Q& Pre-Recorded A
272	Got it. Thank you!
273	Have there been any post construction surveys conducted on the other roundabouts in Morgantown to assess their efficacy in alleviating congestion and hazardous traffic situations?
274	what is the budget of the project?
275	Do you feel this virtual meeting adequately addresses the public concerns as well an in person meeting?
276	If you are concerned with a threat of suicide please refer your neighbor to 1-800-273-8255 for suicide prevention assistance.
277	What is the value of a small business CBD hemp farm in WV's Opiod epidemic environment ?
278	I do not find it necessary to remove an operating farm to address a traffic problem that is only congested two times during the day. Adjust the traffic light if alleviating backed up traffic is the the priority when Mylan let's out at 5pm. The traffics light in this area has worked effectively for years.
279	call in questions are being ignored. we demand an in person meeting when COVID subsides in place of this meeting
280	Why was this public meeting scheduled for the night of the biggest presidental debate in US history?

281	I've found alot of old items on the farm land where the community gardens are located and near by with my metal detector including silver coins from the late 1700s called reales and or pieces of 8 and early colonial coins like large cents and a british half penny and old buttons. Are we sure the land does not have some kind of historical value? I know from maps from the mid and late 1800s that the house owned by the hastings was once owned by a mr Dorsey.
282	This is related to the proposed upgrade of the intersection of the Greenbag Road and Kingwood Pike. The proposed Aaron's Creek detour is not fit for everyday travel. Poor road conditions, no guardrail, steep embankment, no room for two vehicles to pass. This route needs great improvement prior to becoming a detour for this project.
283	No Thanks you! The kingwood pike intersection project would remove 3 local food supplies! Much of West Virginia is a considered a food desert . A food desert: an urban area in which it is difficult to buy affordable or good-quality fresh food. "many poor people live in food deserts—where they have plenty of food but none of it healthy"
284	Would like to see turn lanes and a sidewalk! At both intersections
285	Food Desert: an urban area in which it is difficult to buy affordable or good-quality fresh food. "many poor people live in food deserts—where they have plenty of food but none of it healthy"
286	Preliminary or not. It does sound like your studies and research do need deeper planning with all agencies involved, and better ways to answer tax payers questions. You need more realistic reasons for doing thing, rather than speeding money you have from federal gov.
287	The proposed detour route roads will need considerable upgrades and maintenance in order to accommodate the proposed traffic. Will the additional cost to improve the detour roads be covered under the project funding or will additional funding need to be allocated.
288	There seems to be a private interest to sell this roundabout idea at the detriment of citizens and local farmland. Turning lanes at the intersection of the kingwood pike would suffice for traffic now and long well into the future.
289	This meeting violates the set groundrules. The public comment option 3 to call in with a question or comment is not available. My friend can't threw on the phone. We demand an additional public meeting.
290	The finding that No Significant Impact is not correct!! There is MAJOR IMPACT to the local hemp industry development. This is the Headquarters of WV's 185th Legalized Hemp Farm. At one time, hemp was a WV grown cash crop and a dependable natural resource for the US Armed Forces in WWI and 2. It is now a current and future small business in a growing CBD industry resulting in increase healthy resources for Morgantown residents.
291	There are endangered falcons on the land in question.
292	The agricultural land impacted is two entire for-profits farms;
293	the environment assessment is incorrect! why are you missing key information related to productive farmland?
294	These are our tax dollars at work, The displacements are incorrect. Preferred Alternatives are not preferred by the local citizens.
295	The owner of the corner of the greenbag rd/kingwood pike lot would gladly sell additionally land put in additional lanes to reduce the impact on local residences. Please consider talking to us and considering other Alternatives. Thank you!
296	The citizens request a third party review of the Environmental Assessment.

297	The citizens request an independent environment assessment and project traffic review. These items are not currently complete. Additional information is needed prior to spending Millions of WV's hard earned money. God Bless West Virginia.
298	The Roundabouts in New Jersey are being taken out right now lol
299	Could we consider a turning lane only on the green bag road and not on Dorsey?
300	Senior folks in WV don't like roundabouts.
301	Neither do logging trucks...The logging trucks up the Pike are not on this meeting.
302	This is complete insanity. I'm a long time resident of the Kingwood Pike. I have lived through the 4 way stop sign transition to the light and now this. Do you even have people that are local, living in this area conduct surveys about the validity and need for these changes? I assure you the so called "problems" are no where close to the problems 2 roundabouts in less than a mile will create. I would like to know how you find the Aaron's Creek and Cobun Creek Roads suitable for the amount of traffic that will be forced to use them. Who is going to pay for my vehicles being destroyed because of the condition of those roads? Would you feel safe sending your family out on those side roads? The disturbance of every family that is cut off from town- their jobs, stores etc. The solution is turning lanes not this absurd roundabout. The Kingwood Pike is in horrid condition how about you use those funds to fix the roads? How do you expect busses to safely transport students? You don't think their lives will be at risk? Turning onto Aaron's creek is bad turning onto the Pike from Aaron's creek is deadly. How do you think the home owners on the side roads will feel? How do you expect emergency vehicles to get where they need to go efficiently and safely? This plan is going to adversely effect the lives of thousands of people. Ask the residents- we don't want this! We work hard and pay taxes that we don't want used for this! Have any of you in favor bothered to drive up the Pike and travel those side roads? I beg you to do so and reassess.
303	How long will the Temporary closure of Kingwood Pike be? And, will the alternate routes, a.k.a Aaron's creek road, be paved before Kingwood Pike Closure? Aaron's Creek is less than suitable for this expected heavy traffic use. Will Lower Cobun Creek be open to traffic by then? And will it be paved as well? Again, this is a less than suitable road for heavy traffic.
304	As a user of this area 4 to 6 times a day, i like the preferred chooses and urge the project to move forward.
305	Why is DOT not answering questions about the economic impact of the project on the food supply of the community garden, CBD WV hemp farm, and an heirloom food and seed farm? This is fraud.
306	I would like to see option D for kingwood pike intersection.
307	The historical assessment is incomplete regarding the Dorsey Plantation.
308	This is Dewey Hastings calling. I'm a landowner and always never notified about this meeting. Perhaps you've seen the Progressive commercial where all the agents are trying to talk over the screen. They will not allow me on at this time. So can you see me now? Can you hear me holding a virtual meeting is an acting like it as a fact of boulder dash is based on lies and your reality. I'm glad to have no part of it. It's not being notified. My daughter presented me with a thousand page document over the weekend. I want to let you know that I'm totally disabled and the fact that you never return my calls through the stall or service department of highways is very disappointing. I am your document of a thousand pages does not address any of my questions that presented in April 16th of last month my way engine here, which I spent two hours with Chad offer. Excuse me of an impact your last name correctly l o w t h e r by the way Mister sites, you do have 15 seconds for me. You couldn't wait to get back on the road at the end of that meeting my concerns of address with the engineer Chad was lack of judgment as to when a rogue is next to the retaining wall. I suggested that you get a Lancelot map. I noticed some of your photos didn't show Landslide Maps. You can't put a highway next to a retaining wall. That is perhaps three times in my lifetime since you've built the road. That's the lack of judgment on your behalf. Second issue was mr. Sykes. Drainage there is no drainage on that corner. I thought was she would over seven to

	nine years about the water that you were dumping on my heel and I went to the person $7,000 to run the drain from the roof $8,157 because you neglected to help mean 3rd was wage access to my remaining land. I want to have access to that. I may develop that land and not just be totally towed off. There is no other access of life except through that Circle and I was counting on Chad to contact me since last year two hours. I spent with nothing wrong with the access. I need Road access water access storage lines Power and Gas those utilities could never go across after you put the circle. How old is the value of my land nobody is willing to communicate with me. I'll give you an offer over a decade ago or two million dollars. Excuse me, 1 million dollars for two acres approximately my lamp here ticket. Yeah, the issue was right away. Your diagram describes 81 the king would take us a 60ft since Nineteen Hundred 4081 has been a 30% right away. If you might refer to your records or do your homework, mr. Sykes the department of highways attempted in two thousand and two to say there was a 64 right away and I'm like you do your homework. The project was s +33-181-634-0000 parentheses. Oh seventeen. If that's not enough you can look at the ones that you call me 715-583-1255 plan for their Pump Station. That's 1971 at that time. It was 30 ft off. Thanks for bearing with me. By the way, it would be nice to have someone call me back. It's been a year year thousand page document doesn't address my problems. Why was I asked the other meeting is virtual meeting is a joke my father woke up. I spoke to him Saturday. He couldn't sleep all Friday night. Because he sees this as an opportunity for you to develop some basically land and needs very little prep and put a giant Circle in a ten million dollars from the sockel from the taxpayers. This site doesn't require two million dollars. You could build the Rockefeller Center. How much of that ten million dollars is this company making? Anytime 681-404-9491. My address is PO Box 172, Morgantown, West Virginia 60172. Once again, I was never notified of this. sure egg
309	Why haven't you asked questions from the last meeting? IN-personal comments were not represented.
310	I can't hear anything. I can't voice my opinion.
311	No Build Alternative! Use the Money $$$$$$$ to Fix the road in the WV that could use it!
312	My grandparents are having trouble dialing in.
313	The corner lot is in the city of morgantown. The citizens have not been included.
314	The historical organizations in Morgantown misrepresented the land zoning. The roundabout plan is located on land that is zoned in the city. Land that is also part of a 120 year old farm.
315	I don’t feel the virtual platform allows for discussion of issues as would be allowed in a public in person setting. Overal I am very disappointed with this meeting.
316	My name is John and I was wondering to say the Hastings wouldn't sell Sheetz that property. Why would you want to let the States steal it why would they want to stick to steal it? I bet after you steal their life and you put a Sheetz in cuz we all know Sheetz is a government-run company. The Hastings have a business on that land that pays taxes to the state which means they are productive members of this Society. There's no school right now. Anyway, and I doubt after this whole life parents will ever let their kids back in the States run schooling and indoctrination. I say leave the road alone or put a turning lane in those are the only options and the discussion with you guys are completely overreach yourself. Thank you for listening to my comment.
317	The project milestone for complete Approved Environmental Assessment August 28, 2020. Is misleading the public. The EA is false and dated information. The milestone should be revisited. This is unethical.
318	"preferred option"....preferred by whom??

319	So it’s a sidewalk that connects nothing whatsoever...???
320	these traffic improvements are minor but the project destruction is HUGE
321	Has there been a post construction assessment done on the effectiveness of previous roundabouts built in Morgantown?
322	can you repeat who will be impacted by each alternative?
323	Why aren’t any of my questions being answered?
324	The Fairmont roundabouts were constructed properly in a suitable area for a roundabout. I specifically asked about the ones in Morgantown.
325	The Roundabouts are expensive and dangerous. That was an incomplete answer.
326	Yeah, this is Dave. I'm worried about you know, you guys say there's endangered species and nude image of research about this roundabout and animals, but there's more than just the Eagles box and stuff out there. We got ducks and geese we got deer frogs possums raccoons cats fish coyotes. We got all kinds of stuff out there. You guys just keep pushing pushing all the animals out of here. You guys you guys are supposed to put a playground up on Dorsey Avenue and you build houses you let that guy build them houses up there, huh? And I thought you were supposed to you come down here on the mileground and now they're tearing down all the trees and stuff. So what about them animals? Huh? Did you do your research over there? You just tearing down all the trees over there for nothing for some houses with the doctors. It's ridiculous. I we've had enough of this land grab Behavior. We're tired of it. We don't want to round about you put a turning lane in whatever. We don't want the roundabout. We don't want it. It's not I live up here by this round about you put up there on the mileground. I tell you it's a god-awful thing. It is pitched the wrong way the engineers that built it are completely incompetent. Whoever built that roundabout completely incompetent. That thing is pitched. I mean the grade of the pitch when you go around it's dangerous. It's just too dangerous if you're going to build something. Can you just build it right when you build something? You do it it's slop it just so sloppy. Everything is just so sloppy in this town. When you people do something. It is sloppy. We got a lot of rooms that need fixed. We got a lot of things that need fixing. We need sidewalks these things that are called sidewalks and you're going to put in more roundabouts. Are you going to put aside walk around that roundabout? No, you're not. You're just going to put in more real more concrete cuz you want that Federal money, huh? You need that Federal money so you can get bunch of jobs all we need jobs. That's great, except the jobs going to be over in about two years. It's going to be a two-year job. And then well what else can we pair up so we can drive around and people down there driving on the green bag or a bunch of lazy bums. Anyway, you drive drive drive. Nobody want to walk there. Everybody's driving lazy bum wage. You can't sit there for five minutes and go to like lazy bums should put it back to a four-way stop the way it was never had a problem with that. You would wait wait your turn and then you go but we're so lazy and it's Todd. Completely lethargic. I'm sorry. I just had to speak my mind on that. I just think I just think whoever built these things around here is completely incompetent. I'm sorry. I'm really sorry. And you know, we pay all these money all these tax dollars and we don't got nothing out here for the bunch of it's a joke. It's a joke. You guys need to do better. You need to do better by the people who own the land and not us we own the land. We own the resources. Thank you very much. Thank you.
327	This roundabout would on a steep grade. The pike is a mountain by the way.
328	My name's be I don't want all about that screen backwards against house. Thanks.
329	Hello, my name is Ted Hastings. I was waiting on home as a speaker. I press star three at the beginning of this phone call and wage. I waited on hold for over an hour and half and at 7:45 15 minutes before the end of the meeting. It was addressed that you would not be taking last phone calls off. I had a locked it I wanted to ask and talk about and I feel shorted on my time. I also want to let you know that I know of three other people that had called in and I am unable to speak because they to dial Star three and they have since called me being like I can't get through and they're not answering my phone calls. And then now it's 7:45 moderator address that we would not be taking live calls. And I was

	just wondering why that was an option the whole time during the meeting if you could address that for you getting I'd appreciate. We went ahead and applied law enforcement that we think there might be something going on because we we've been waiting to talk for over an hour and half and nobody addressed it. And then like I say 15 minutes before the meeting is over. You said you're not taking live calls. So I went ahead and press the star button decided to leave a message. This is my message, and I'm just wondering why the end of the meeting new address not taking live calls, even though people have been trying to call and live the entire meeting. My name is Ted Hastings, and my phone number is 681-285-9922. Please call back for a response. I'd appreciate it. And also we called 911 Mecca at 6:25 and talk to operator 919 covid-19 about the fact that we had been waiting for such a long time and then over an hour later. You all said that you're not taking any lot. I just wanted to let you know that stock and then I appreciate wage. Thank you.
330	I have driven the Greenbag Rd and Dorsey Ave for the last 38 years and continue to drive it daily. As a former land owner on the Greenbag Rd, current resident of South Park, contractor at a wellness business on the Greenbag Rd, and whose children attended both schools on Mississippi St and Greenbag Rd, I have consistently observed that the only Major back up occurring has ever been and continues to be...on the Greenbag Rd between the Atomic Grill and Mississippi St. I have never experienced major back up of traffic on...Kingwood Pike-Dorsey Ave-or Greenbag Rd to Aaron's Creek Rd. As a regular traveler of the roads in question, I support a TURNING LANE going between the Greenbag Rd (at Atomic Grill intersection) to Mississippi St. Thank you for the opportunity for we the people of Monongalia Co. to have a voice on what would affect us daily.
331	Has there been a public poll to see if the local population is for or against this roundabout?
332	you said a "season and a half to two seasons;" is that meaning fall/winter or two years?
333	TAKE ACTION: There is an online petition on change.org against the massive destruction of healthy farmland for a huge earth scaring roundabout.
334	Shame on US. We the people demand better for our citizens and our farmers.
335	I support a Turning Lane between Mississippi St and the Dorsey Ave/Greenbag Rd/Kingwood Pike intersection.
336	No Build Alternative
337	Very disappointed.
338	Please read the tables. Some people can not see the documents.
339	This meeting was no where fair to the citizens of Morgantown!!!
340	Option F is a one letter improvement>>?
341	That's crazy
342	Why was archaeology survey report an abbreviated report instead of a full report?
343	I am strongly against adding a roundabout in the intersection of Dorsey and Greenbag Road. That intersection benefits from the traffic lights and would be improved if there is a turning lane and/or turning traffic light. If possible, expanding Lucky Lane would help with those trying to turn onto Dorsey and Greenbag. Roundabouts in this area is not intuitive to most drivers here. People have continually proved themselves completely unable to properly use the roundabouts at 705 and the Mileground. What makes this roundabout different in terms of performance? It gives little confidence that adding a roundabout in the intersection of Dorsey and Kingwood would benefit the area. The alternatives for turning lanes (options D and E) or adding a turning light would vastly help if improvements had to be made.

344	The round about at the traffic light is welcomed. The morning and evening traffic hour can be very congested. There are several accidents at the light for those who are crossing lanes. In recent years a pot farm was created which is more than disturbing. They often burn the pot in large onsite camp fires. The stinch spreads through our entire region. I'm not sure how they received a permit considering a school and prison is nearby. If you acquire property from them I'm certain it wont be missed by the majority of residents. Please proceed with sidewalks as people are often walking the busy road with little room to dodge traffic. Night walkers are especially concerning with no room to get away from oncoming traffic. Lighting is limited.
345	No roundabouts in general
346	Will the roads that will be alternative routes be upgraded to sustain all of the extra traffic that they will endure?
347	Please proceed with the project and roundabout. It is much needed for that area and to support future growth. There is no need for a red light at that location when alternatives exist.
348	Phone call to WVDOH requesting additional information. Summarized by WVDOH: Mary Hastings wanted some info on the project, as well as to let the WVDOH know some things about her property. Her family has farmed the area for 120 years, and this project will demolish her entire hemp farming business. Her father owns the entire farm, but this project impacts her business directly. She wanted to know the difference between the study area and project area, the EA/FONSI process, and the FHWA guidelines for public meetings. She thought that the virtual public meeting process did not adequately address the public comments and concerns and is hoping for another meeting, as well as a revised EA to address what the current EA is lacking, in her opinion. She wanted information on the historical reports and wanted to know why there are redactions,. She asked for FOIA information so that she can see the reports in their entirety, which I gave her. She also mentioned the Kennedy Center Federal Correctional Institution, and said that when it was built there were artifacts found there that are now in the Smithsonian. She wanted to know why there weren't artifacts found within the study area.She asked about hellbenders, golden eagles, and wetlands and mentioned that they would all be impacted by this project. The call ended with her saying that she appreciated me listening to her concerns. She said that they had several environmental firms they were in contact with and that they may do their own Environmental Assessment.
349	I wish to file a complaint against the moderator of the Sept 29, 2020 - 5: pm public comment session by the WVDOH regarding the Greenbag Road Improvement Project. During the presentation, the moderator refused to read negative comments/questions that pertained to the proposed roundabout construction. In particular, the devastation to the non-profit organization, Conscious Harvest Cooperative, and the local business Joy and Hemp Universal LLC did not receive significant attention in the meeting. The Environmental Assessment also failed to consider either of them to be a "business" that would be displaced by the roundabout. This is a great injustice and clear discrimination against these local businesses/organizations. I am infuriated by this blatant disregard of the community values.
350	Public comments weren't heard: 1. The chat window was inaccessible to some for the entire meeting. 2. Live callers (*3 option) weren't taken AT ALL. I spoke to multiple people who were unable to comment because they wanted "in que" for hours…[end of message screenshot]
351	Lengthy comment summarized: Writing to share opposition, feel citizens are not being represented. Two public meetings for the project. Deadline for public comments is 10/29/2020. First meeting most were against this proposal. DOH has not listened. [quotes from EA and links to documentation] The MPO and city want to remove truck traffic from downtown onto Greenbag Road. [link to news article] Roundabouts will do the opposite as truckers avoid roundabouts and roundabouts are less safe. DOH was planning roundabout in Sabraton but pulled after comments. Now left turn lane with arrow. Why add 2 roundabouts to this truck route? Residents are concerned about the proposed detour, Aarons Creek Road is one lane and potholed. No way to detour 1K people on Aarons Creek for 2 year project timeline. Based on past history

	with DOH could be 5+ years for saving 5 minutes at the intersection. Only traffic at 5 pm. Hastings family is strongly opposed to the project. They would not be opposed to losing land for turn lanes if needed. Roundabout won't fix traffic. Traffic backs up only on Greenbag. Left turn lane with shorter turn lane than the 100 ft won't take homes. Changing light would work also. DOH engineers recently stated roundabouts don't work during heavy traffic, removal of new roundabout at UTC. [quote and link to news article] The wide sidewalks are overkill for the road. Don't know anyone who would allow children to walk along the highway. Rare to see pedestrians walking to Giant Eagle. Mon County levy in 2019 provides free bus service for all residents. Landlords get free passes for their tenants. MPO long range plan considered future growth and stated a turn lane would be sufficient. No mention of roundabouts. [excerpts and links from MPO report] Signal timing is not addressed yet MPO report stated it is an issue [excerpt and link from MPO report] Waste of 11+ million dollars for this project considering state of road conditions in the area. [photo of a pothole near Greenbag/Kingwood Pike intersection] Rest of road is in worse shape, slide repairs needed, roads worn to gravel base. Proposed detour route unsafe. MPO never addresses these important issues. Could use $11M to fix other problems than sitting at a stoplight for a few minutes.
352	To WVSHPO - I am reaching out concerning WVDOT's recent Environment Assessment (EA) for the Greenbag Road Project in Mon County. I have been informed by DOT that the EA has already been reviewed and approved by SHPO. Since it was just released to the public and the landowners I have just started my review of the EA. There appears to be significant information missing in the EA related to the "Patton Farm" which is my family's (Hastings/Smith) farm for the last 118 years, also commonly known historically as the Dorsey Plantation. I am concerned with the incomplete and inaccurate of information in the Historic Property Information Sheets. For instance, the info sheets identifies features of the house that have been removed, but in reality the house is in the process of being restored and historical features such as the porch details are being rebuilt and repaired. Therefore, these historical features will be on the house will in fact be intact when it work is completed. Also the two oldest buildings on the property: The Coal House and the Spring House, are not complete in their descriptions. I would ask that the historical references related to this project be reviewed by SHPO for accuracy and completeness as I believe this property could be eligible for listing in the National Register of Historic Places (NRHP).I am available should you have any questions or would like more information as my family has maintained this property as active and productive farmland since 1902 and my 95 year old Grandfather is still with us and is very knowledgeable about the history. Also, a couple weeks ago we found a penny from 1891 in the front yard.
353	I have a few concerns about the round about at the bottom of kingwood pike. The reason your getting a lot of traffic to that intersection is because everyone from Preston county/ reedsville/ arthurdale/ kingwood area use this route to get back and forth to work my suggestion would be to put on and off ramps on the bridge for the interstate and you wouldn't get any traffic coming down to the 4 way. I also heard the plan is to use lower Aaron's creek rd and summer school road for the detour I would advise you to travel these roads before you consider making those roads a detour. Aaron's creek road is not wide enough for the big trucks that travel up the kingwood pike on a daily basis and the little bridge they would have to cross to get back on the pike is not made for bigger trucks it would collapse. Summer school road in the area of east gate the turn is not big enough for tractor trailers to make the turn I'm guessing 10 tractor trailers a year get stuck on the turns and have to be towed back to the entrance of summer school road and route 7 I've looked at the bridge and you have plenty of property to put on and off ramps on the kingwood pike. Traffic will be bumper to bumper between 2 roundabouts it's not going to work.
354	The farmland that would be taken as part of this project is a community treasure. The Hastings have opened their land for use by the community, many of whom would not have access to land to grow gardens and farm if not for the generosity of this family. Please reconsider either the positioning of the roundabout or the project altogether. Many families and individuals rely on this property remaining intact.

355	There is no real need for a roundabout at the intersection of Kingwood Pike/Greenbag Road in Morgantown! There are several businesses with large trucks that travel the Kingwood Pike daily and a roundabout would be so inconvenient for those businesses, hard for those big log trucks to get through daily! We need a 4 way stop put back in or a turning lane to go up the Kingwood Pike! A roundabout in this area is just not needed! Please listen to the people! Everyone already complains about the roundabout on the Mileground and about how much everyone hates it being there! Please we do not need this at all!
356	Just because you can do something never means that you should always do it. There is no need for a roundabout in this area, there is no want for one. you have a farm that is essential to the area and you will destroy it because you simply have funds you need to use by a certain amount of time? preposterous. the DOT of oregon should be ashamed.
357	No roundabout
358	We DO NOT need a roundabout at the kingwood pike/Greenbag intersection. Traffic would move much smoother if they would just widen the road and add turning lanes to turn onto Dorsey Ave and Kingwood Pike. This is the only area left in our town with light traffic and easy patterns for the elderly. My grandmother is 82 and will only drive this stretch of town because it's easy to drive.
359	So I have an issue with the widening of our street Luckey ln, I would like to talk to someone about this in person. But I'm going to make a long story short, I had to fight to get ONE speed limit sign up bc people FLY on this street but they said the other way would require the state to put a sign up cause in guess half is city half is state. Anyway the sign is Useless anyway as NO ONE obeys it and I've told multiple cops it needs to be watched for speeding however they NEVER DO. I have kids and they school is on this road and not only do me and my family have trouble with the speeding and our safety having to get in and out of our cars and driveway but the busses and pedestrians from the school have the same issue even the principal agreed with me that speed bumps should be placed. So that's where I'm going with this, the state and them told me they won't put them down for whatever reason. This road needs speed bumps placed bad! And EVEN MORE so now bc of you guys widen this road it's going to be so much worse bc people won't have to be careful and slow down sometimes when they meet head on traffic. Please I'm so over worrying about one of us getting hit or kids and or school busses having this problem, I don't see how it's that big of a deal to put speed bumps down, atleast from the stop sign (that many people run constantly on top of speeding) to the stop sign that meets Dorsey ave in front of the church on Dorsey so I'd say like 4 speed bumps ATLEAST 3 would do well. So again from the intersection of Dorsey and Luckey lane up to the stop sign for the school in between family dollar and the school please please!!!! Thanks you
360	During the online presentation your response to my question of shifting roundabout towards the former Atomic Grill location was that it wasn't feasible due to necessary retaining wall and additional property acquisition. I have more questions regarding the roundabout concept. 1) your roundabout concept shows a complete re-alignment of dorsey ave / kingwood pike at and before the intersection. please explain in detail how maintaining existing alignment is not less costly. 2) Will you not need a retaining wall on higher elevation side (across from former Atomic Grill) since your proposed future rd alignment uses up that entire embankment? 3) Table E-3 is confusing. Can you please provide a detailed breakdown of the estimated costs of Intersection options D,E, and F for Dorsey Avenue / Kingwood Pike Intersection, as well as total acreage impacted and # of landowners afftected by each of those options. 4) How exactly have you quantified the value of the community garden? Is it based on land appraisal alone, or have you calculated cost for the nonprofit to relocate operations, volunteer value (in WV, the dollar amount for volunteers is $20-22 / hour). 5) In the interest of a 3rd party review by another engineering firm, are the preliminary design / concept drawing files available? Since the comment period is coming to a close this month, a timely response to these questions is appreciated. Thank you.

361	I would Like to request the following: - Additional intersection alternatives because the current options have significant impact on businesses and farmland. - The corner lot at Kingwood Pike intersection IS in fact active and productive farmland. The current EA does not include these information community assets. -The livelihood of an entire family would be destroyed with the proposed alternative. - Additional due diligence as important economic and socio factors have not been accurately portrayed in the Environmental Assessment.
362	PLEASE DO NOT INSTALL ROUNDABOUTS ON GREENBAG ROAD!!!!! I am in full support of building turning lanes on the Greenbag road ONLY, and not on the KWP, or Dorsey Ave. Thank you.
363	The current proposal of the roundabout on Kingwood pike, will have measurable and irreversible damage on both environment, human, and economic opportunities. It is my belief that this community has not been properly supported with investigation of what has been deemed "insignificant impact" to the Hastings property and livelihood. I wish that the community I was raised in, valued the relationship with its community by empowering an equitable dialogue between property owners and those with decision making power. How the state of West Virginia has handled itself within the "open forums" addressing the proposal of the roundabout, is an abuse of power.
364	To Whom It May Concern: The proposed roundabout is unwelcomed by over 200 residents. The Hastings farm provides the community with organic pesticide free vegetables, medicine, and jobs. The community garden section is farmed, and the vegetables are sold to the locals. If traffic flow is the issue then it could be corrected with the addition of turning lanes off of Greenbag Rd. If passage for large trucks is of issue, then the S curves prevent this roundabout as an option. Please also consider this land has been farmed for over 100 years, and the fertile soil is precious. The Hastings also have a historic farm house on the property that would be a shame to lose. The old Atomic Grill building at the four way intersection could be used to plan a new road. Businesses never seem to do well there but, the family farm is going strong. Thank you for your time and consideration to this matter.
365	I have spent hundreds of hours in the field working and observing traffic. There is only traffic twice a day for about 30 minutes and the only back up is on green bag road, NOT Dorsey. We only need a turning lane on green bag road. As far as redirecting trucks is concerned, the trucks will not take that route no matter how nice you make the intersection because of the s-turn on green bag road between giant eagle and get go gas station. These proposed roundabouts are an absolute over kill, a waste of money, and completely unnecessary. Please reconsider this egregious over step and save us tax payers millions of dollars and save nature from being destroyed under the guise of progress by installing turning lanes only on green bag road and no roundabout.
366	Against roundabout on Greenbag Road!
367	I am strongly against a roundabout. Sending traffic down Aaron's Creek Road is NOT a viable option.
368	Turning lanes would work a whole lot better than a round about!
369	I'm not for the roundabout

370	The Kingwood pike DOES NOT need a roundabout!!! Adding turning lanes would just be perfect!!!! Aaron's Creek Road is a cow path and you want to detour traffic that way, stupidest idea ever!!! My husband is a logger with s very large truck, can you imagine him trying to drive Aaron's Creek with a load of logs, pretty much a one lane road, what's he to do when he meets a car???? School buses, they are large, and again trying to detour them to a cow path with a load of kids, AGAIN, STUPIDEST IDEA EVER!!! The winter months that intersection is even more dangerous for these larger vehicles with ice and snow, how do you expect them to do with a roundabout?????? This just isnt a practical solution!!!! Keep the red light, add turning lanes, leave the rest alone....
371	No to the round a bout
372	I do not support the roundabout. I travel this area daily and am very familiar with roundabouts on the Mileground and in Fairmont (as well as those in D.C.), and one is not needed on Greenbag Road. What is needed is significant improvement of the road, especially on Kingwood Pike from this intersection to the bridge. It could be that the subsidence has finally been addressed, but the drainage and pavement are atrocious. Please fix these issues.
373	Greenbag rd. Needs turning lanes with a light with green arrows. NO ROUNDABOUT!!!!
374	No roundabout
375	Against Roundabout
376	No
377	No roundabout at the intersection of greenbag rd and kingwood pike. Just add turning lanes.
378	No roundabouts just turning lanes.
379	Roundabouts don't work. Turning lanes only. If not turning lanes LEAVE I T ALONE. The road up the pike sure needs attention first. Fix the roads first.
380	The roundabout is not needed. They do not function in high traffic areas. The two in fairmont work well because traffic flow is not as heavy as Morgantown. People cannot drive in Morgantown to begin with, let alone adding in another roundabout. Adding turning lanes would suffice and not take away as much property as the roundabout.
381	NO ROUND ABOUT. WE DONT NEED IT
382	Absolutely no roundabout! It will make things worse for that intersection. It works just fine the way it is!
383	I say no to the round about. Fix the dang roads and possible turning lanes. But no round about and leave the farm alone
384	Yes, yes, yes think it would be a wonderful thing to have helping with the flow of traffic. Especially during rush hour times!
385	I say YES it would be a big improvement for traffic
386	No to roundabout
387	No roundabout useless money spent its to dangerous for that area turning lanes will be all needed with turning light
388	I'm in favor of the roundabout
389	I'm in favor of the roundabout
390	This money could be spent by fixing the roads we already have. A round-a-bout is not needed. It is wasteful of tac payers money and then a family loses their farm. Then what will the state take next? Closing the pike and devouring traffic will get someone killed. There is nothing wrong with stop lights or stop signs, the end result is the same.
391	We dont need a round about there the one on mileground is bad enough amd dont work

392	This is not a good place for a round about. It used to be a 4way stop. There is now a stop light that works just fine. The roads leading into the intersection is what needs fixed. It is falling in. A round about is not going to fix that.
393	No roundabout
394	Against the round about! Please listen to the residents, the community.
395	I have lived all by the last 20 years on the pike, but also still drive it alot and don't see the need for taking peoples properties, its fine the way it is
396	No to the round -about
397	All we need is a turning lane not a roundabout. Use the money to fix the Pike all the pot holes and caving in road.
398	No roundabout
399	No to a Roundabout. It just needs a turning lane. Why waste Tax payers money where it's not needed. Spend it on fixing roads. Ty
400	I'd like to see the traffic flow better than it has before the traffic light went into effect, maybe the round about is the answer maybe not but the courtesy turn was working out years
401	NO round about!!!!
402	The Aaron's creek detour is not safe for the amount of traffic that will be traveling while the lower section of kingwood pike is closed.
403	No
404	NO
405	We've never had to have a "Roundabout" in all these years, so why should anyone think we need one now?!!! Instead of spending time and money on something that almost everyone is against, how about fixing the roads that already exist?! For the sake of humanity DO NOT put a Roundabout in! Thanks for your time! Have a great day, & Stay Safe!
406	No round about. Put in a turning lane.
407	I live on the Kingwood Pike and I am totally against the roundabout at the intersection of Greenbag Road and he Kingwood Pike. First, there is no reasonable alternate route to use during construction, second, it would take farmland from a family that has owned it for years, third, this intersection is really not that much of a problem traffic wise. It's only busy during rush hour times. The money would be better spent to actually fix the roads instead of putting in an unnecessary roundabout.
408	I am not in favor of a roundabout at the intersection of Kingwood Pike and Greenbag Road. It is unnecessary and would create a long term major headache for all of us who live on and travel the Kingwood Pike on a daily basis. There is no feasible alternate route to use during construction. The traffic is not that bad to warrant this. The money would be better spent to actually repair the road.
409	No roundabout on the Kingwood pike
410	Yes please
411	No roundabout!! This would be so dangerous for the logging trucks coming off the Kingwood Pike. Also, this would be so confusing for all the elders that drive this road daily. PLEASE NO ROUNDABOUT, THIS WOULD BE DISASTER IN THE MAKING!!!
412	WE DO NOT! Support this "so called improvement"on the green bag road . For one if there is enough money to waste on a junky round about,then how about you come up the pike and fix our road first. secondly,there is no safe nor sufficient detour roads to get to and from our homes.thirdly,with it would being turned into a round about would cause a wonderful family to loose their farm land,which they use as their lively hood and to take away from this family could cause them to
